# Simple Addition.

"Clearly, the noise and disorder of conventional construction would have disrupted the lives of the three hundred residents already living at San Camillo when we began the Phase II addition."

"Spancrete enabled us to literally fabricate the addition off site, then bring it to the construction site and erect it quickly. Normal activity in the existing building continued with minimal interruption."

"All of San Camillo's structural and exterior components were made by Spancrete. Of all available materials, Spancrete's precast concrete offered the best sound resistance and the least maintenance."

And, with Spancrete Industries' records of the original color mixes, matching the color of the existing building was easy.

"What Spancrete allowed us to do was complete a perfectly matched, ten-story addition in just sixteen months."

Jack Shepherd, Shepherd Legan Aldrian Ltd.

# OTIS

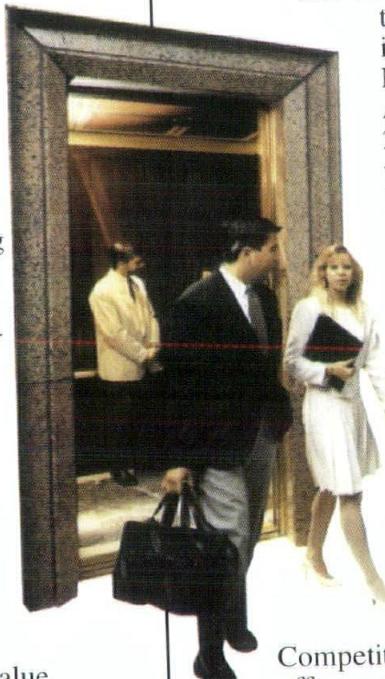

## COMMITTED TO QUALITY AND CUSTOMER SATISFACTION

**ELEVATORS:** From our Hydraulic low-rise installations to our sophisticated gearless elevator systems, the Otis name is synonymous with quality and dependability. An outstanding example is the Otis Elevonic® control system which employs advanced computer technology in adjusting to up-to-the-second traffic conditions.

For Hospitals, Nursing Homes, commercial and residential applications, Otis offers proven reliability, greater efficiency and increased flexibility to meet a variety of elevator installation needs.

**PRE-ENGINEERED MODELS:** Designed to help meet delivery and installation deadlines without sacrificing performance, reliability, or value. Hydraulic and geared systems are available in economical pre-engineered models.

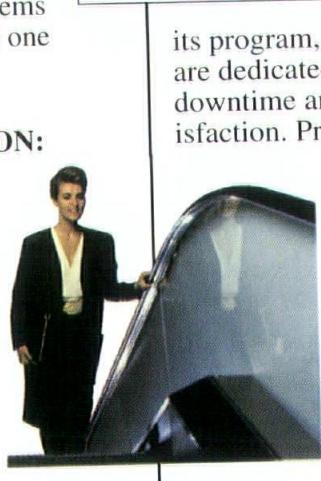

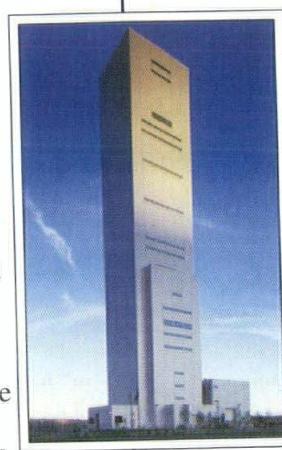

**QUALITY ASSURANCE:** The Otis Quality Assurance Center, Otis Service Center and OTISLINE® Service are further evidences of the steps we've taken to deliver the highest level of quality products and services that today's market demands.

**TESTING:** The Otis commitment to quality and safety is more than just words. The 383 foot Otis Test Tower is the tallest of its kind in North America. At 29 stories with 11 hoistways, this structure allows testing on all types of elevator, escalator and prototype components.

**ESCAL-AIRE® MODEL ESCALATOR:** The industry's finest escalator available today. Competitively priced, it offers a smoother, quieter operation, advanced handrail drive systems and a solid unicast one piece step design.

**MODERNIZATION:** Otis visual and performance modernization makes it possible for older elevators to rival even their newest counterparts. With an unparalleled selection of architectural

products, visual modernization creates an excellent first impression for current and prospective tenants. Performance modernization upgrades system performance and improves reliability and passenger satisfaction.

**MAINTENANCE:** When it comes to elevator service, Otis has the resources to do the job right and complete it on time. Experience, training, advanced systems, reliable parts and responsive service separates Otis from every other maintenance organization in the world.

Using preventative maintenance as the backbone of its program, Otis maintenance teams are dedicated to minimizing system downtime and maximizing tenant satisfaction. Pre-planned maintenance helps simplify budgeting and reduces the chances of unexpected repair costs.

**Otis...**  
Committed  
To Quality And  
Customer Satisfaction.

Welcome to the 1994 edition of the annual *AIA Wisconsin Construction Industry Handbook*, an invaluable reference source on matters pertaining to AIA Wisconsin. This year's edition, our fourteenth, contains directories of AIA

## **Construction Industry Handbook**

Wisconsin members and member-owned firms, background on state legislative issues, information on AIA documents and a special "Buyer's Guide" section that lists advertisers by CSI Data Filing Format divisions to help you identify consultants, products and services for your projects. It also includes a new regular department titled "Elevation," which will focus on public relations issues affecting our profession.

In addition to over 1,200 AIA Wisconsin members, the *Handbook* is distributed to over 2,500 other design and construction industry leaders across the state. It also is provided throughout the year to public and private owners interested in selecting an architect for their building projects.

For 1994, upcoming issues of *Wisconsin Architect* magazine will feature commercial, residential, public, cultural, health, recreation, interior, landscape and restoration projects by member architects. Future issues also will feature a 1994 AIA Wisconsin Convention preview and the projects selected to receive Design Awards.

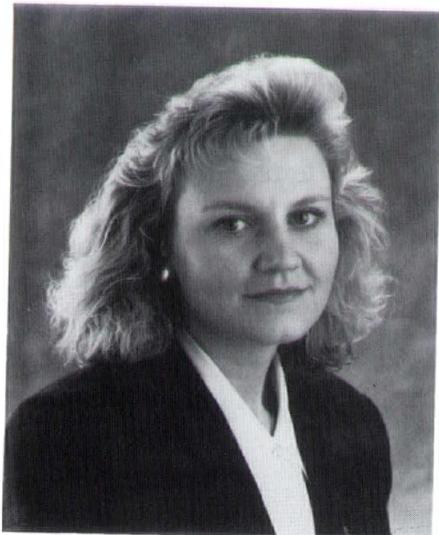

Your comments and suggestions regarding the magazine are welcomed. On behalf of the Editorial Advisory Board, I encourage all members to submit projects and/or articles on topics of interest for publication.

Peter J. Schuyler, AIA, Chairman  
Editorial Advisory Board

"How much money do you suppose it would cost you to go see the volcano on Maui? A couple of thousand, right? Well, when I tell people I can save their business that much every month on their operating costs it gets their attention. I'm Vivian Kuss from  **Wisconsin Electric**. You can reach me or one of my associates by calling our **Energy Solutions** line at **800-544-7989**. We're good, we're fast and we'll save you money. Maybe even enough to book the next flight to the islands."

# President's Message

1994 marks a year of change for AIA Wisconsin. First and foremost, we have a new name, but the changes go much deeper than that.

We have a new look. Along with the adoption of our new identity, the face of our organization is changing. As we continue to grow in number, so does the diversity of our membership. We now have more women and minority representation than ever before; and those numbers are increasing steadily, both at the state and national level. This is not just changing the face of the organization, but of architecture as well.

Our individual practices are changing. The economy as well as technology have forced us to make some tough choices in our practices and in our lives. Survival means being leaner, smarter and faster. Layoffs have forced many architects to begin their own firms, but rapid advances in technology, now available at a reduced cost, have allowed the small

firm to compete on equal footing with the larger firms. Joint venture and partnering relationships are also now more common than ever.

The public perception of architects is changing. AIA Wisconsin has established a Public Awareness Committee which spent time last year reviewing the perception of architects from without and within. The results of these surveys, which you may remember as *Hotline Page Two*, are helping to create a clear focus and direction for our public awareness efforts.

Wisconsin architects are becoming a political force! Over the past year, we have worked very hard to advocate the reenactment of a Statute of Repose. After enlisting the services of an outside lobbyist, we have established the strongest grassroots legislative campaign in our history. Our efforts have paid off thus far. The legislation (Senate Bill 314) has passed the Senate and is making its way through the Assembly. We now have our foot in the door. Let's continue to develop those important legislative relationships.

The membership's needs are changing. Last year the Membership Committee conducted a *Member Survey* which was very well received. The results of this survey are now being analyzed by Chapter officers to help in providing activities and programs that will be of the greatest interest to our membership.

We have a new School of Architecture. Now, in addition to having a nucleus of talent in our state, we have a state-of-the-art training facility that

puts us in direct competition with the best schools in the nation. This resource will become even more valuable as continuing education becomes required for AIA membership.

Even our dues invoice has changed. As you may have noticed, you now receive only one invoice for both your national and state AIA dues. This was done to help simplify the membership renewal process and to free up state staff time for member-driven services.

I hope that all of this change does not alarm you. WSA has enjoyed a long and successful history. It is my hope that AIA Wisconsin will not only meet, but exceed the goals and expectations set by our predecessors. If you feel that this organization needs vast improvement, let's work to change it. If you feel that it's running just fine, let's work to make it even better. Either way, the future of AIA Wisconsin is in your hands.

It is an exciting time for architects and for our organization. We are poised on the brink of a new world in which architects can play a key role. I look forward to the challenges of the new year and the chance to work with the many fine architects in our state. Please join me in making AIA Wisconsin an even stronger and more vibrant organization than it is today.

A handwritten signature in black ink that reads "Lisa L. Kennedy".

Lisa L. Kennedy, AIA  
President  
AIA Wisconsin

Project	Governor's Residence, driveway and courtyard
Location	Madison, WI
Features	Special color-pattern stamping to match historic look of the grounds
Sponsor	Wisconsin Ready Mixed Concrete Association

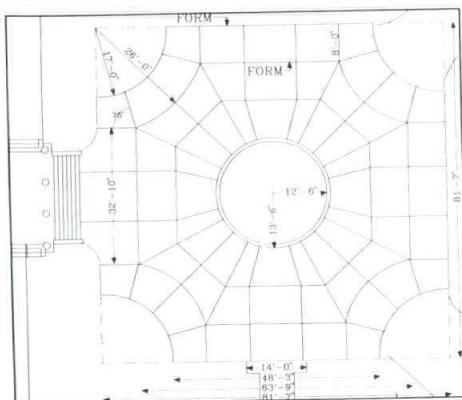

## A Concrete Example of Excellence

The elegant gray driveway highlighting the beautifully landscaped lawn. The innovative pattern-color stamping, providing the look of cobblestone to fit the time period of one of Wisconsin's most historic residences. The solid, long-lasting durability that will withstand busloads of children and thousands of visitors annually.

All of these qualities came together through the creative use of concrete in the Governor's Residence project. Concrete provides unmatched performance, yet allows for endless innovative possibilities to enhance the appearance of a driveway, courtyard or patio. It highlights buildings and existing landscapes to provide the highest level of sophistication and beauty, without sacrificing performance and stability.

Concrete provides the classic combination of style and performance, whether it's adding attractiveness to a business or home, or providing the proper setting for entertaining diplomats and dignitaries.

**To obtain a video explaining the versatility of concrete, and how it applied to the Governor's Residence project, contact the Wisconsin Ready Mixed Concrete Association at 1-800-242-6298.**

# The Keys to Understanding Accessibility Design Guidelines

## Understanding CABO/ANSI A117.1-1992

### Bringing Down the Barriers—The Video

The International Conference of Building Officials' videotape program, **Understanding CABO/ANSI A117.1-1992**, illustrates site and building accessibility, accessible routes, and building elements referenced in the provisions of Council of American Building Officials (CABO)/American National Standards Institute (ANSI) A117.1-1992. The video is a graphic presentation that takes you on an accessibility inspection, beginning at the site and moving progressively through the building. As you visually progress through the structure, problem areas addressed in the standard are identified to give you a fast, clear understanding of accessibility compliance. (20 minutes)

**Cost:** \$69.00

**Item No.:** 286X92

## The ANSI A117.1-1992 Standard

Finalized in December 1992,

CABO/ANSI A117.1-1992 is now adopted by reference in the *Uniform Building Code*™ (U.B.C.). Additional copies are available.

**Cost:** \$25.00

**Item No.:** 338S92

### ICBO's Answer to Accessibility

All new public accommodations and commercial facilities are now required to be accessible and usable in conformance with the ADA. After reviewing the implications of the ADA on the construction, design and enforcement professions, ICBO recently adopted CABO/ANSI A117.1-1992 and the Board for the Coordination of the Model Codes report as the new accessibility requirements for the *Uniform Building Code*. These provisions, which have been incorporated in U.B.C. Chapter 31, will help provide methods for gaining accessibility and usability in new and existing buildings. CABO/ANSI A117.1-1992 has been endorsed and referenced by all model code organizations.

## Accessibility Reference Guide

### An Illustrated Commentary on U.B.C. Chapter 31 and CABO/ANSI A117.1-1992

A valuable resource for architects, interior designers, plan reviewers and others who design and enforce accessibility provisions, this 131-page guide contains:

- A brief review of the historical background of activities leading to current accessibility and usability regulations.
- The newly adopted *Uniform Building Code* Chapter 31, as published in the 1993 *Accumulative Supplement*, and accompanying commentary and illustrations to clarify these provisions.
- A chart cross-referencing the U.B.C. and CABO/ANSI A117.1 provisions to the requirements of the Americans with Disabilities Act (ADA) Accessibility Guidelines.
- An accessibility checklist of key elements to be evaluated and reviewed as applied to accessible design and construction.
- A listing of agencies, organizations and publications which provide information on accessibility issues.

**Cost:** \$22.95

**Item No.:** 286R92

## Accessibility CheckList

Based on the 1993 *Accumulative Supplement to the Uniform Building Code* and CABO/ANSI A117.1-1992, the **Accessibility CheckList** is an ideal guide for code review during preliminary design and plan review. This easy-to-use checklist provides hundreds of comments regarding building accessibility by occupancy, site accessibility, accessible exterior routes, egress provisions and areas of refuge, and other detailed code requirements.

Designed to be loaded onto a hard drive, the automated CheckList includes file formats for DOS-compatible computers in WordPerfect™ 5.0/5.1, Microsoft™ Word 6.0 and ASCII text. Use your word processor or text editor to add to and edit the list of comments. (A printed copy of the CheckList is included with each purchase.)

**Cost:** \$29.00 per set.

**Item No.** 091C20—3 1/2" disk

**Item No.** 091C21—5 1/4" disk

# AIA Wisconsin

## Commissions & Committees

The AIA Wisconsin Board of Directors has established numerous committees of volunteer members to assist in the development of a broad range of programs and services for the benefit of the entire membership and profession. The wide array of AIA Wisconsin committees reflects the varied interests and concerns of the membership.

Your involvement and participation on AIA Wisconsin committees is strongly encouraged. You will benefit from the opportunity to network with other architects from across the state with similar interests. AIA Wisconsin and your fellow members will benefit from the knowledge, skills and expertise you can provide these committees as they shape AIA Wisconsin programs and services.

There also are ample opportunities to get involved with local Chapter committees, task forces and special events. Your participation at the Chapter level can make a big difference. For more information, please contact local Chapter officers in your area.

At the state level, each AIA Wisconsin committee is assigned to one of four commissions: Executive, Education & Practice, Government Affairs and Component Affairs. Each of these commissions has a "director advisor" who is a member of the AIA Wisconsin Board of Directors and reports on committee activities at regularly scheduled AIA Wisconsin Board meetings.

The following is an outline of the four AIA Wisconsin commissions and their related committees. It contains the mission statement for each AIA Wisconsin committee along with the name and phone number of the committee chairperson. If the work of a particular committee sounds interesting to you, please contact the chairperson for further details on how you can get involved. If you can't find the committee you're looking for, contact one of the director advisors about establishing a new AIA Wisconsin Committee.

### **Executive Commission**

*Director Advisor:* Ross Potter, AIA, (608) 257-3825

**Executive Committee:** To exercise general supervision over the affairs of AIA Wisconsin; to assure that all administrative, financial and other matters assigned to officers by the Bylaws and/or delegated to the Executive Committee by the Board of Directors are carried out in an efficient and effective manner; to safeguard and maintain office and other property; to regularly evaluate the job performance of the executive director and other staff; and to serve as the Board of Directors of *Wisconsin Architect* magazine. *Chairperson:* Lisa Kennedy, AIA, (414) 332-9072

**Editorial Advisory Board:** To provide regular advice and counsel to magazine staff and to develop recommendations for the Board of Directors to assist *Wisconsin Architect* magazine in achieving its established purposes of featuring the work of member architects in a creative format,

providing practical informative articles of educational interest, keeping members informed of current AIA activities and programs, and presenting a forum for material suppliers to advertise their products and services. *Chairperson:* Peter Schuyler, AIA, (414) 351-6390

**Mini-Grassroots:** To plan, develop agenda for and conduct an annual orientation session on AIA Wisconsin affairs, policies and procedures for the incoming Board of Directors and Chapter officers. *Chairperson:* Kevin Connolly, AIA, (414) 289-0900

**QBS Committee:** To create, maintain and improve a resource readily available to public owners and members for the objective, informed, responsive and professionally responsible promotion of Qualification Based Selection (QBS) procedures; to monitor QBS program and advise the Board of Directors as to its operations; to establish objectives, recommend policies, approve presentation materials, promote owner and member participation, coordinate with related professional organizations and evaluate program performance. *Chairperson:* Harry Schroeder, AIA, (608) 782-3993

**Public Awareness Committee:** To encourage architects to work together to develop and maintain a clear understanding of the present and future roles architects play in society so to effectively position the profession to be of greatest service; to develop materials and programs to expand the public's awareness of architecture and architects as well as architect's awareness of the public's needs and expectations. *Chairperson:* Kevin Connolly, AIA, (414) 289-0900

**Convention Committee:** To work with Board of Directors, staff and other committees to plan, promote, coordinate and conduct an annual statewide conference on design, practice and technology issues that is attractive to members, allied professionals and material suppliers and that achieves or exceeds financial goals established by budget. *Chairperson:* Charlie Quagliana, AIA, (608) 266-1458

**Design Awards Committee:** To convene an annual design awards jury for selection of the work of member architects that merits recognition for design excellence; to assist in disseminating the results of this selection to members and public through *Wisconsin Architect* magazine, the annual Convention and media thereby fostering public awareness of the work of member architects; to sponsor Honor Awards speaker and banquet; and to encourage dialogue by the public and among members of the purpose and direction of architectural design in Wisconsin. *Chairpersons:* Bob Cooper, AIA, (414) 271-5350, Katherine Schnuck, AIA, (414) 961-3427

## **Education & Practice Commission**

*Director Advisor:* Robert Shipley, AIA, (608) 238-7626

**Continuing Education Committee:** To research and make recommendations to Board of Directors and Chapters regarding continuing education programs and policies to meet members' needs and expectations. *Chairperson:* E. Mitchell Spencer, AIA, (715) 232-1176

**Environmental Education Committee:** To develop sample lesson plans and other materials that can be used by teachers and members as a guide for increasing the public's awareness and understanding of architecture. *Chairperson:* Nancy Hubbard, (414) 229-4014

**Wisconsin Architects Foundation:** To promote the science and art of planning by advancing the standards of architectural education, training and practice; to provide scholarships to Wisconsin students pursuing degrees in architecture; to provide program grants to student chapters at universities and technical colleges in Wisconsin; and to support programs and activities that increase the public's awareness and appreciation of architecture and architects. *Chairperson:* Gary Zimmerman, AIA, (414) 476-9500

**Intern Development Program:** To continue to educate interns and practitioners about the Intern Development Program (IDP) and its requirement to become a registered architect in Wisconsin. *Chairpersons:* George Owen, AIA, (414) 359-2300, Arlan Kay, AIA, (608) 251-7515

**Fall Workshop Committee:** To work with Board of Directors and staff to plan, promote and conduct an annual one-day workshop on practice issues of interest to members. *Chairperson:*

**Historic Resources Committee:** To encourage the preservation of Wisconsin historic resources; to promote within the architecture profession and the general public a

greater awareness, appreciation and respect for those historic resources; to provide leadership, programs and technical support within the profession on preservation-related issues, serving as a source of information and education. *Chairperson*: Bob Corbett, AIA, (608) 283-6300

**Dean's Advisory Group:** To establish a more formal link and format for increased dialogue between the UWM School of Architecture & Urban Planning and the profession by providing for discussion with the Dean on School-related issues and programs in conjunction with regularly scheduled meetings of the AIA Wisconsin Board of Directors. *Chairperson*: Bob Greenstreet, Dean, (414) 229-4016

**Minority Resources Committee:** To establish liaison with national AIA committee and to provide networking opportunities for minority architects and interns in Wisconsin. *Chairperson*: Walter Wilson, AIA, (414) 771-6222

**Women in Architecture:** To establish liaison with national AIA and regional WIA committees and to develop programs of interest to women architects and allied professionals. *Chairperson*: Marjorie Brown, AIA, (414) 459-1723

**AIA Documents Committee:** To assist the AIA Documents Committee by encouraging and compiling recommendations from Wisconsin members on possible revisions to AIA documents. *Chairperson*: Brian Larson, AIA, (715) 834-3161

### **Government Affairs Commission**

*Director Advisor*: Joseph Powelka, AIA, (608) 241-3340

**Legislative Committee:** To identify public policy issues of importance to Wisconsin's design and construction industry; to develop positions and make recommendations on legislative issues of interest and concern to the architectural profession; to lobby appropriate legislative committees and administrative agencies; to encourage the active grassroots participation of members in the legislative process; and to communicate with other professions that have similar legislative concerns. *Chairperson*: Fred Zimmermann, AIA, (608) 238-7626

**DFD Liaison Committee:** To establish a continuing dialogue with the state Division of Facilities Development and to establish a format for discussion and resolution of problems and issues of mutual concern. *Chairperson*: Jerry Dommer, AIA, (608) 241-3340

**DILHR Liaison Committee:** To establish a format for ongoing discussion and resolution of Building Code, plan review and related issues of concern to the profession and the Safety & Buildings Division of DILHR. *Chairperson*: Warren Bauer, AIA, (608) 274-2741

### **Component Affairs Commission**

*Director Advisor*: Erik Hansen, AIA, (414) 739-4932

**Membership Committee:** To develop and implement programs and materials for expanding membership and for increasing membership retention and participation; to profile and analyze membership attitudes and needs for use in planning member recruitment

programs, developing methods to encourage increased member participation and recommending new programs and services to respond to member needs. *Chairperson*: Mike Vander Werff, AIA, (414) 730-0055

**Celebrate Architecture:** To promote programs that increase architectural awareness for the purpose of greater appreciation, understanding and enjoyment by society; to assist in coordinating the planning and development of annual Celebrate Architecture activities in each of the Chapters. *Chairperson*: John Sutton, AIA, (608) 255-1245

**AIA/AGC Liaison Committee:** To improve working relations between AIA Wisconsin and AGC Wisconsin and to enhance understanding of contract documents; to develop recommended practices for use by architects and contractors. *Chairperson*: Clarence Huettenrauch, AIA, (414) 351-6390

**Fellowship Committee:** To identify and recommend to the Board of Directors candidates for nomination for advancement to the AIA College of Fellows; to encourage members to seek advancement and assist candidates in the preparation of nomination materials. *Chairpersons*: Ron Bowen, FAIA, (608) 238-7626, Wayne Spangler, FAIA, (715) 234-9056

**Golden Award Committee:** To screen and rank Golden Award nominations for submission of recommendation to Board of Directors. *Chairperson*: Frank Dropsho, AIA, (608) 221-6263

**AIA Regional Directors:** To represent North Central Region on the national AIA Board of Directors and to communicate with the leadership of components in the region. *Directors*: Duane Kell, AIA, (612) 645-6806, James W. Miller, AIA, (608) 238-2661

# PERMABAN™

## A Forming System for High Quality Concrete Floors WAREHOUSING & COLD STORAGE

### THE CONCEPT

An improved and refined system for protecting construction and contraction joints. Eliminates chipping and spalling due to heavy fork lift traffic, while providing floor tolerances to F-min 100'.

FREEZER WAREHOUSE
FLOOR SECTION and
JOINT-RACK LAYOUT

#### NOTES:

##### STEEL ANGLE JOINTS™

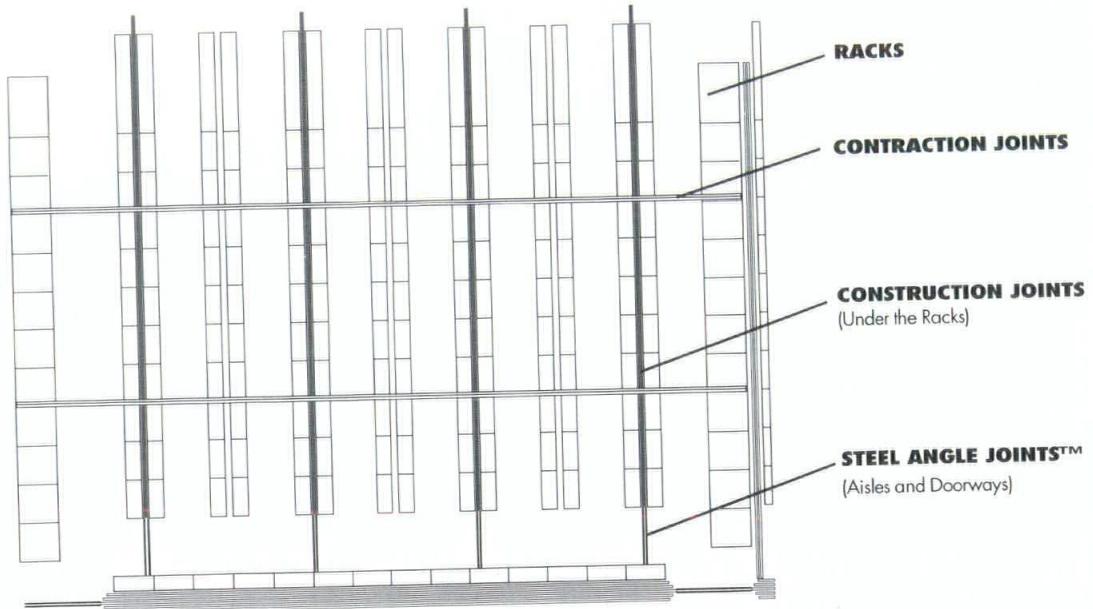

- PNA Steel Angle Joint™ in all traffic Aisles, door thresholds
- 3/4" x 18" square dowels @ 1' centers
- PNA Expando-Lok™ on 1/2 bar length

##### CONSTRUCTION JOINTS

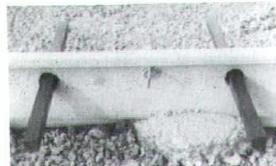

- PNA Concrete Forms™ set on pads of concrete
- 3/4" x 18" square dowels @ 1' centers
- PNA Expando-Lok™ on 1/2 bar length
- PNA Freezer-Fil™ in all joints

##### CONTRACTION JOINTS

- 3/4" x 18" square dowels @ 1' centers in dowel basket
- PNA Expando-Lok™ on 2/3 bar length
- PNA Freezer-Fil™ in all joints

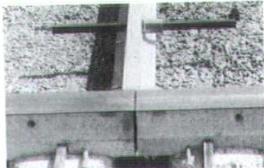

### The components are:

#### PERMABAN™ CONCRETE FORMS

provide an economical forming system, achieving exacting tolerances without puncturing vapor barrier and insulation. The dowels provide additional load transfer capability at the joints.

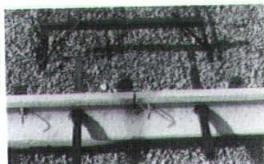

#### STEEL ANGLE JOINTS

offer armored joint protection in areas subjected to heavy vehicle traffic such as doorways or turn around areas.

#### EXPANDO-LOK CLIPS

fit over the dowels and eliminate cracking at the end of the dowels while allowing horizontal movement due to shrinkage and/or differential expansion.

#### DOWELS, DOWEL BASKET ALIGNERS

recommended at contraction & construction joints for increased load carrying capability.

#### PERMABAN™ JOINT FIL

is a two part semi rigid joint filler with a shore A hardness of 80. This prevents sidewall spalling and chipping, and will not "weld" slabs together.

This is a very brief overview of what we believe to be the best forming system for quality concrete floors in America today.

A 12 minute video is available at no charge. For more information call or write -

**"Serving the Industry with Flexicore"**

## *Perspective*

by Kasia Gawlik

During an extensive undergraduate education, I managed to take a class in every building on campus. As a graduate student, all my waking hours have been spent (until recently) in Engelmann Hall. I feel uniquely prepared to say that the new Architecture and Urban Planning Building is my favorite building on campus. This is not just *esprit de corps* speaking, folks.

What I like most about the new building is its sense of light, openness and airiness. No other building on campus has this quality. The extensive glazing along the east spine and the oversized windows in the rooms allow visual connections within the building and views out to campus and beyond. On sunny days the mullions create wonderful patterns on the walls and floors; while at night the east spine's glass block floors glow from the lights below.

The cascading stair has become a place where people stop to chat or shout up to catch the attention of a friend. It's also a great spot to locate missing persons. The objective is to visually spot the party in question and to run like mad to catch up with him or her, usually at the other end of the building. The adjacent hallway has become the place to catch the sunset before returning to the drafting table.

The two-story north glazing, the double-height space and the ability to see into the other parts of the building make the commons space the new building's heart. Physically, the Third Coast Design Center, computer lab, exhibition space, vending machines, lecture

## **Breaking Through the Walls**

*Research, Outreach and Service at SARUP*

by Herb Childress

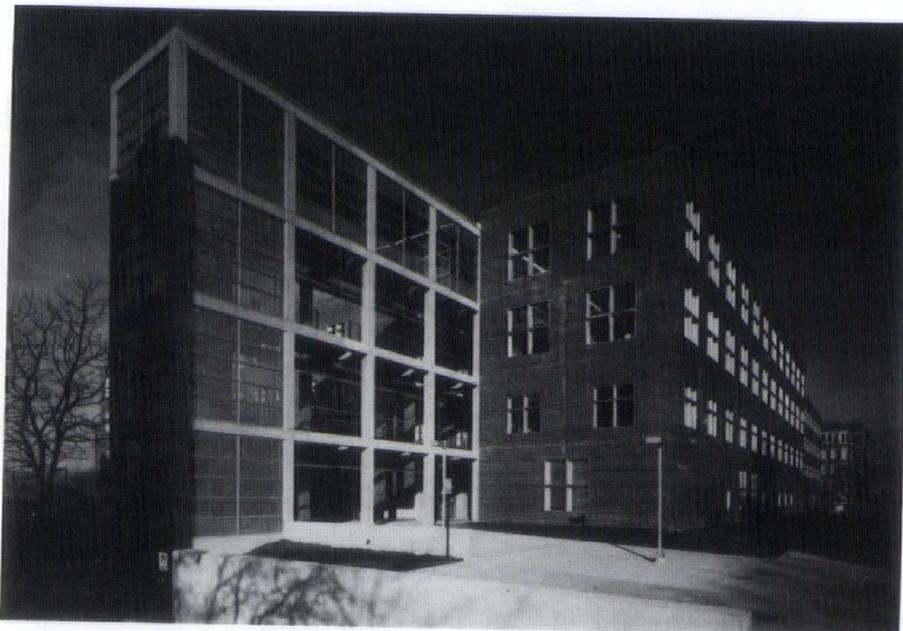

It would seem that, with their new quarters just completed, the faculty and students of the School of Architecture and Urban Planning would be spending more time than ever in their workspaces. In fact, the opposite is true; the new building's infrastructure and layout has allowed the school's outside activities to be even more extensive than before.

### **Research**

SARUP's research arm, the Center for Architecture and Urban Planning Research, is the umbrella agency which helps to administer research projects conducted by individual faculty members and by the four permanent research agencies within the school. These groups, the Institute on Aging and Environment, the Wisconsin Space Grant Consortium, the Planning and Design Institute and the new Johnson Controls Institute for Environmental Quality in Architecture, have been able to improve the

layouts of their libraries and work areas. The payoff has been immediate: each of the four has been able to extend their activities and take on new projects in this first semester.

Individual faculty have been active in research work as well, with 16 of the 26 faculty members currently involved in active projects in areas as diverse as historic preservation, computer modeling of the interface between solar conditions and buildings' HVAC control, the analysis of the social conditions which produced specific vernacular building types and women's experiences in architectural education and practice. And the doctoral program, one of only 15 Ph.D. programs in architecture in the U.S., has also found its new quarters amenable to research and study; the eight new three-person offices are a much better work environment than the single bullpen office shared by 18 students in the old building.

Photography: Ed Purcell

### Outreach

One great advantage gained directly from the new building is the ability to expand the already-popular continuing education program. The new classrooms and computer laboratory, which includes a 20-station AutoCAD classroom, have allowed the school to increase the number and diversity of courses offered to the design community throughout southeastern Wisconsin. The regular schedule of well-attended courses ranges from advanced CAD techniques to building code seminars and professional practice colloquia.

This outreach into the professional community is matched by the participation of practitioners in academic events. Critics for studio juries and competitions, advisors for Masters' theses, and lecturers in the Friday Afternoon Live presentation series are regularly drawn from southeastern Wisconsin and the Chicago area.

### Service

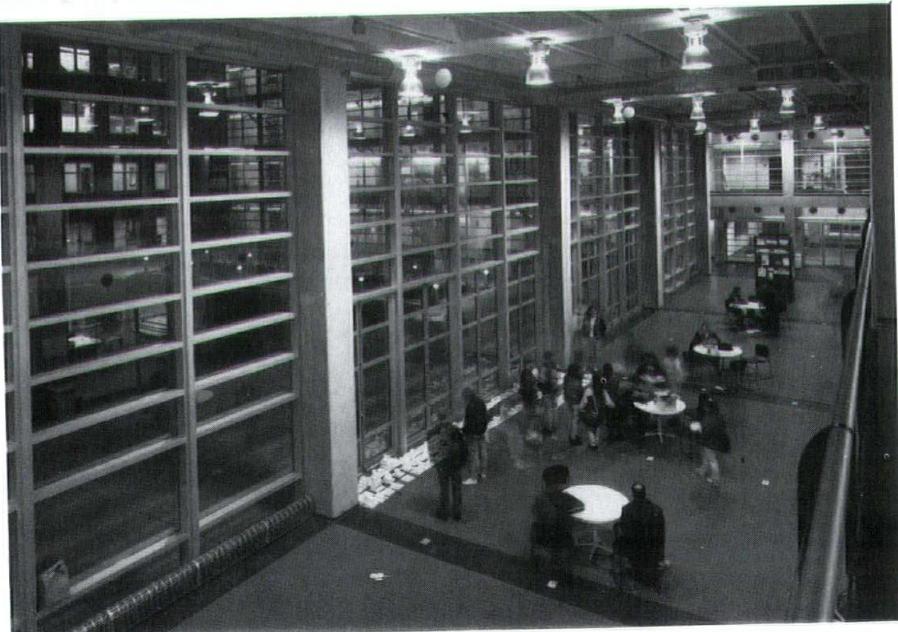

Over 80% of the faculty are also engaged in professional practice as architects, planners and consultants. Their work has assisted private clients, communities and neighborhood groups not just in Milwaukee

but throughout the Midwest. The knowledge they gain in practice is directly returned to classrooms and research. In addition, faculty and student workers in the permanent research agencies also do consulting projects and contract research, extending their theoretical insights into the world of practice and building new theory from that contact.

The new Architecture and Urban Planning building has been described as a school within a school, with the active classroom spaces mostly on the first and fourth floors and the faculty, administrative and research offices on the second and third. The extensive programming process indicated that close contact between faculty and between research agencies was critical to the intellectual mission of the school. The success of the school's community outreach—in research, teaching, learning and public service—suggests that the programming was worthwhile.

*EDITOR: The author is a doctoral student in the Department of Architecture. His research centers around the use of public space by teenagers and ways to reduce adult-teen conflicts over those spaces.*

Photography: Ed Purcell

hall and courtyard all open up onto the space. But the commons space is really defined by the activities held in it. Hosted by a variety of dignitaries, Tea and Bikkies, our new Friday pre-studio tradition has been gaining in popularity. This semester, the undergraduate 400 studio staged an Oregon-style intermediate review. Boards from 70 student projects lined the first- and second-floor walls. People emerged from all corners of the building to review the projects. Most often, though, we use the space to take a break from a CAD project or to meet a friend.

The courtyard not only serves as a counterpoint to the concrete, glass and metal of the building, but also as a whiffle ball diamond, Nerf field, reading lounge, tanning deck and lecture room interchangeably. Wrapped around it is the most engaging elevation of the building. And, it's nice to look out at something green and not worry about a soccer ball or some other small round object sailing through the studio window and landing on a finished rendering. (We can still see the soccer field, but they can't reach use any more.)

The smokers in our SARUP population, who have been delegated to the exterior of the building, have claimed the south fire stair as their own and dubbed it the Aloha Deck. Actually, the open-air platforms and stair provide an opportunity to step out and catch a breath of fresh air (there are no operable windows in the building) and in more pleasant weather to have a picnic lunch.

We've learned from this building. Linearity without conveniently placed vertical circulation is one thing that I'll think about before incorporation in a design. In practice, the cascading stair and

locations of the other stairs necessitate a great deal of back tracking. Although a great exercise program, when in a hurry or at the end of a long day, this can be annoying. Another thing is to remember to include a projection booth in any lecture hall design.

In sharp contrast to the cramped, patched-together charm of Engelmann, the new building's interior has been accused of being sterile and harsh. Personally, the austerity of the finishes and designs appeal to me. As in Engelmann, we are still trying to recreate home. During our move to the new building, the studio couches and major appliances were left behind. Slowly but surely, replacements have been appearing. Despite our best efforts, we still benefit from the luxury of open space.

The building is developing a personality of its own. One eccentricity is the "clap on/clap off" lighting controlled by motion sensitive detectors not sensitive enough to catch the flick of a RapidoGraph or the rustle of a turning page. Besides the more conventional solutions of arm flapping and pencil tossing, one inventive individual tied a piece of toilet paper in front of the sensor. Attached to the paper were strings leading to each drafting table. One flick of the wrist and the problem was solved. A footnote: the environmental controls are activated only when the room is occupied, i.e., when the lights are on. No lights, no air conditioning.

The building has managed to force an opinion out of almost everyone. There are people who dislike it vehemently and those who defend it with equal emotion. I think that Terry Plater, an Urban Planning faculty member, hit the nail on the head: "The building is not about

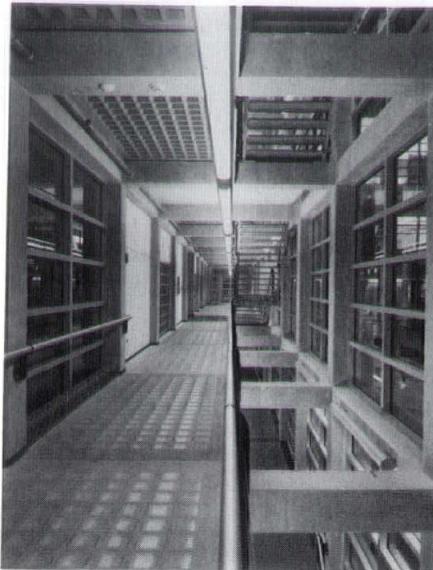

## A Planning View

by Nancey Green Leigh, Ph.D.

Two separate departments join together to create the School of Architecture and Urban Planning; and a key aspect distinguishing the disciplinary focus of Urban Planning from that of Architecture is its *raison d'être*: to serve the *public interest* in teaching, research and practice.

There are a number of ways in which the new building will support the Department of Urban Planning's primary purpose. It supports our educational mission by alleviating the crowded conditions under which students and faculty previously had to work and by significantly expanding the computing facilities and other technical support vital to conducting our classroom and research activity. We have high hopes that the new facilities will be useful in attracting greater numbers of new students that our larger space and recently expanded faculty are now able to accommodate. The public spaces of the building and its greater capacity to accommodate social functions serve to increase the interaction between planning and architecture. This, in turn, builds community spirit and greater understanding of the need for, and value in, collaborative efforts between the planning and architecture disciplines. It should also be noted that in a time of retrenchment in higher education expenditures in many parts of the nation, this new building signifies a strong commitment by the State of Wisconsin and its taxpayers to the pursuit of excellence in public higher education.

As an educator and a planner, however, it would be a disservice to my commitment to serve the public interest if I did not point out that there are a few problems and challenges in

Photography: Ed Purcell

the realization of the new building's design. These appear to have arisen where the desire to make a visual design statement, or the lack of desire to do other than to meet minimum state building standards, took precedence over the desire to fully understand the needs of the new building's users. Two of the most illustrative examples are found in the building's power tool workshop and in its southeast exterior staircase. In the power tool workshop, students and faculty use an array of noisy equipment (table saws, sanders, drills, etc.) required to construct many of their design projects. It was designed with bare concrete floors, walls and ceilings, giving no consideration to the noise levels generated by the equipment it would hold. The result is deafening noise levels.

The intent in designing the southeast exterior staircase was to provide the building's emergency exit, as well as to create a visual gateway between the eastern and western portions of the campus. Ironically, however, the stairway acts not as a gateway for the building itself, but rather as a barrier to many who would seek to use it to enter or exit. This is due to the see-through, open grill design of

the stair landings. Females wearing skirts have expressed discomfort over the exposed feeling the staircase gives. Particularly significant for the staircase's designated emergency exit function is that females wearing narrow heels have great difficulty walking on the stairs because their heels fall through or catch in the grills, while females *and* males with a fear of heights find walking the staircase traumatic because of its see-through quality.

Solving the new building's problems such as the two examples discussed here provides its designers, constructors, regulators and users with an important opportunity for learning. Further, the example that can be set in the process can contribute to

architecture's educational mission in teaching appropriate design and to planning's educational mission to be as inclusive as possible in considering the needs of the users of public space. In the overall scale of the new building, its design problems may be regarded as relatively small. However, the opportunity to serve the public interest by the examples set in resolving the new building's design flaws is indeed great.

*EDITOR: The author is an Assistant Professor in the Department of Planning at UWM who teaches and conducts research in the areas of urban and regional development, local economic development planning, industrial restructuring and changing standards of living.*

appeal. What the building does, and what it should do as the home of the School of Architecture and Urban Planning, is engage the user, visually, intellectually and physically. That is the success of the building."

*EDITOR: The author is a graduate student in the joint degree program in Architecture and Urban Planning. She has a professional background in graphic design and is currently a teaching assistant for an undergraduate class.*

## SARUP Construction Process

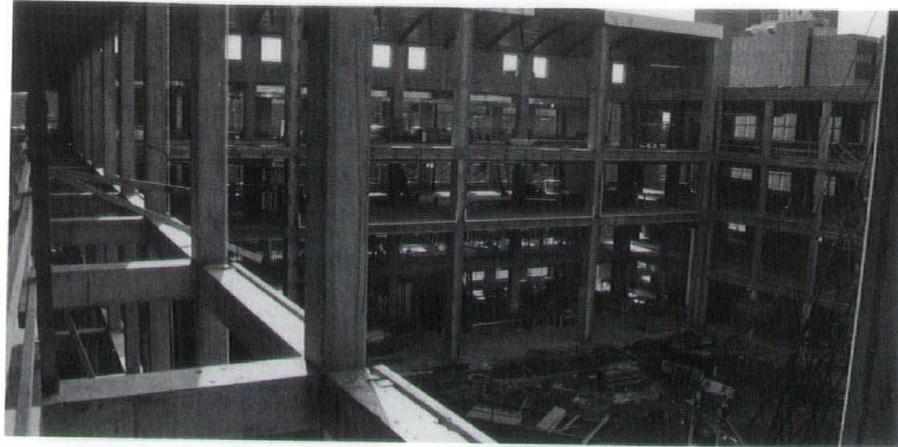

by Harry Van Oudenallen, AIA

The newest building to go on line at the University of Wisconsin-Milwaukee, located at the southwest corner of Maryland and Hartford Avenues, is a modern four-story building designed by the firms of Holabird and Root, Chicago, and Eppstein Keller Uhen, Milwaukee. The design responds to a variety of concerns and input from the State, the faculty and staff, the students and the campus administration. It is sited in such a way as to be urban, creating in its street facade on Maryland are two masses which are slightly offset and separated, giving the viewer a peek into the large courtyard on the interior. The design distinguishes circulation spines as different structure and treatment than the space dedicated to teaching and office spaces. The design addresses the teaching needs of the students and faculty in that the building systems attempt as much as possible to expose their purpose and their integration into the building aesthetic.

It is in regard to this intent that the building has interest in its construction process. When the exposure of construction and systems take place, an exceptional burden is placed on the construction team. In this regard, the construction management team of Findorff and Associates was exceptional, adjusting to the complex and often arcane capital construction process of the client, the State of Wisconsin. The architectural firms, who had previously never worked together, also outdid themselves. They were able to reasonably respond to the program and the information requirements of the construction management team in spite of the inadequate response for information, budget approvals for changes and new programmatic requirements from the State.

As a faculty representative during a year-long process of construction management, I was privileged to

witness efficient construction review meetings, clear communication from the construction and construction management side, timely requests for information and a desire from the contractors to build a good building. The architects responded in kind with enthusiasm for the wishes of the users, a concern for quality, a quick response to answer questions and an explicit process of note-taking, newsletters, construction updates, etc. The State, on the other hand, with its various representatives, could not respond in timely fashion to decisions needing to be made, to requests for alternate reviews, commitments to products and finishes and approvals on materials and details. The building design went out to bid severely scaled back in terms of quality finishes and amenities at the insistence of the State. When the bids came in almost 33% under budget, the process of reclaiming the deleted finishes and upgraded wall sections

and superior details made the process of managing the construction more difficult.

In spite of these difficulties, the building was completed in timely fashion for occupancy at the start of the Fall 1993 semester. The process of erection itself had a multi-impact on the faculty, staff and students of the School. On the one hand, it was an excellent learning experience to view the progress, to discuss the rationale for certain construction systems, technique and timing and to be able to use the construction as an example of the multitude of decisions by so many different players that need to be made in a timely and coordinated fashion. Decisions that were weather-dependent, decisions that were material delivery-dependent, decisions that were affected by trade union negotiations and decisions that affected workplace safety became opportunities for the faculty to instruct and educate the students about this aspect of architecture. Site access, although difficult for insurance reasons, was not critical, since the building was so visible from off site and because it was surrounded by public space.

The structural system is exposed in the final finish so that the care necessary for erection was evident and therefore slightly slower, affording a better understanding of the frame as part of the aesthetic. Below grade level is bisected by a utility tunnel and a cantilevered footing to adjust for the tunnel and was also visible during construction. The building has two locations for HVAC systems, necessary because of its length and because of the tunnel location. The foundation work was blessed with good weather and the contractors took full advantage of this to address the weather-critical aspects during this window of time. As a result, the structural frame was ahead of schedule.

The brickwork and HVAC systems are also exposed requiring a high degree of craftsmanship, sometimes not well integrated and compromised by State specifications. As a teaching opportunity, these systems are lessons in the care and thoughtfulness that must be developed during the design development stage. The demands of an exposed system and modernist aesthetic are most evident here in their failure to build in the manner consistent with the design intent. It is also here that having to work with an overly-conservative construction estimate created difficulties in specifying materials and finishes. During construction meetings there was an optimism that because the bid came in so far under budget that these substitutes for better materials and finishes would be made with due speed and in the long-term interest of all concerned. However, the attitude toward architects, builder and user about restitution of budget for substitutes was quickly communicated through what this author can only describe as an intentional delay to avoid restitution. The window of opportunity was soon passed by the construction schedule. Critical decisions were lost between the meetings and Madison, a temporal and setting juxtaposition which created a "big crack" phenomenon.

The School is now occupied. It is literally wonderful in terms of spatial qualities, full of light, opportunities for informal contact and places for informal and secure formal exhibits. The cascading linear stair and atrium is a magnet for inter-floor contact; and the general transparent nature of the circulation off the courtyard makes the school more intimate than the previous facility. The building is

still being completed; and our furniture is not all here yet, making it premature for a full evaluation of the facility. However, if counting smiles is an indication of satisfaction on the part of the users, the building seems quite successful.

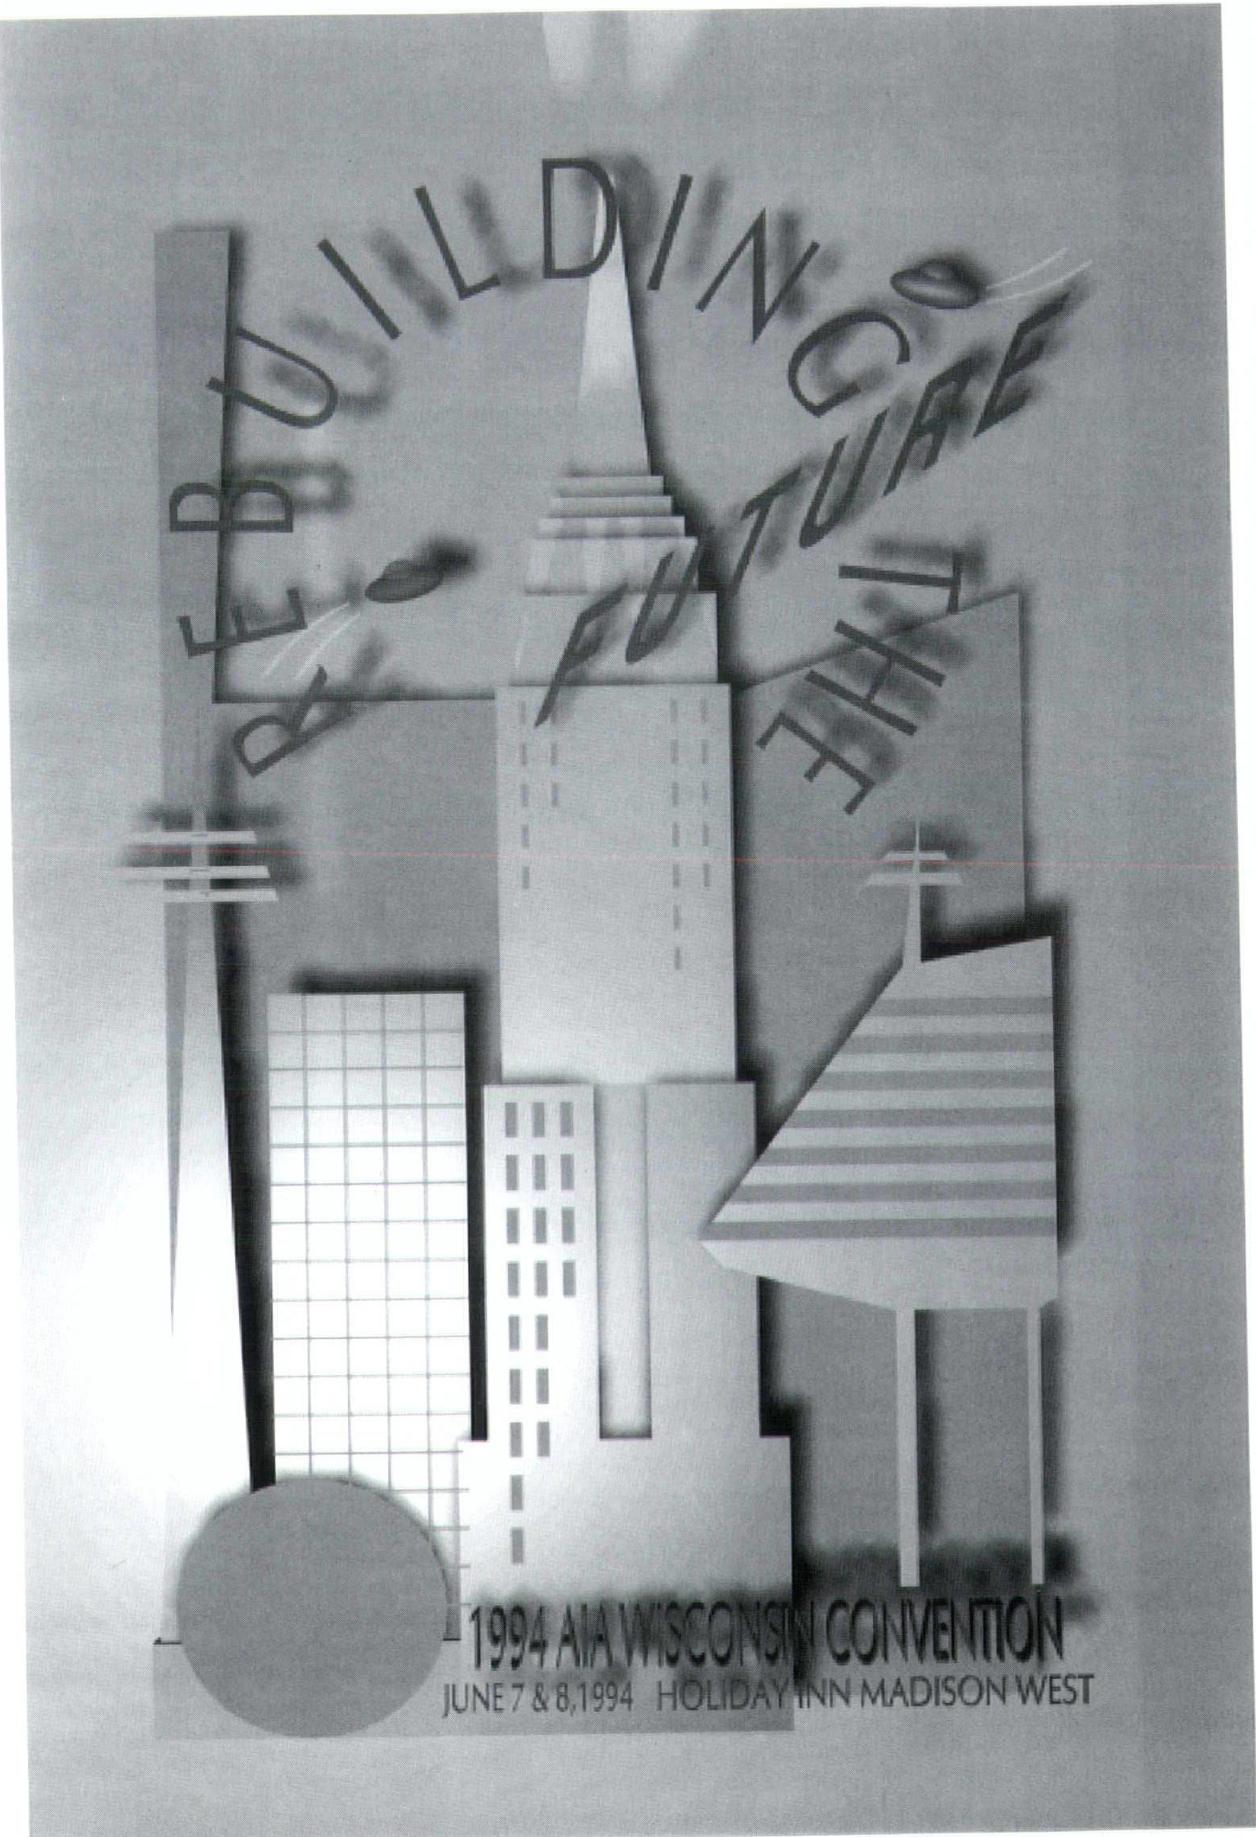

*EDITOR: The author is Professor of Architecture at UWM and was the Director of Campus Planning at the University of Oregon during the period referred to as "The Oregon Experiment."*

## Miscellany

The architects of the new School of Architecture and Urban Planning building on the UW-Milwaukee campus were Holabird and Root, Chicago, in association with Eppstein Keller Uhen, Milwaukee. SARUP graduates Art Chadek, AIA, now of Kahler Slater, and Dave Dell'Agne, AIA, of Eppstein Keller Uhen were integral to the project.

At 123,000 square feet, the new Architecture and Urban Planning Building is twice the square footage of the former school and makes the UWM facility one of the largest schools of architecture and urban planning built in the past forty years in the United States. For the first time, level one design students have a permanent work station within the school.

The School of Architecture and Urban Planning Building has been designated a Center of Excellence with the University of Wisconsin System.

# AIA Wisconsin Membership Directory

AIA Wisconsin is the statewide component of The American Institute of Architects. With over 1,200 members, AIA Wisconsin represents Wisconsin architects and allied professionals in private practice, corporations, industry, government and education.

AIA Wisconsin is composed of four local Chapters: Southeast, Southwest, Northeast and Northwest. Each AIA Wisconsin member also is a member of one of these local Chapters.

The objectives of AIA Wisconsin and its members are:

- To advance the science and art of planning and building by advancing the standards of architectural education, training and practice.
- To coordinate the building industry and the profession of architecture.
- To promote the aesthetic, scientific and practical efficiency of the profession.
- To insure the advancement of the living standards of people through their improved environment.
- To make the profession of architecture of ever-increasing service to society.
- To cooperate with and promote the objectives of The American Institute of Architects within the state of Wisconsin.

The accompanying *1994 AIA Wisconsin Membership Directory* is divided into four sections corresponding to AIA Wisconsin membership categories:

**AIA Members:** Registered architects who are Architect members of The American Institute of Architects (AIA). Within this membership category, Emeritus members are designated by AIA-E and Fellows of The American Institute of Architects by FAIA.

**Associate Members:** This section includes Intern AIA and Associate AIA members. Intern members are those who are eligible by education and experience and actively working towards licensure as an architect.

Associate members include individuals without architectural registration from a U.S. licensing authority but who are either employed under the supervision of an architect (Practicing), have a professional degree in architecture (Degreed), are university faculty involved in architectural research or teaching (Academic), or have an architectural license from outside the U.S. (International).

**Professional Affiliate Members:**

Individuals who are not architects but may be registered to practice their professions where such requirements exist (e.g. engineers, landscape architects, interior designers, artists and other professionals whose work is related to architecture).

**Student Affiliate Members:** Undergraduate and graduate students attending architectural schools and vocational-technical colleges in Wisconsin.

The *AIA Wisconsin Membership Directory* includes the following information for each member: name, firm name, mailing address, daytime telephone number and local Chapter. The *Directory* is updated annually as part of a survey of all members conducted each fall.

If you have any questions, comments or suggestions regarding this *Membership Directory*, please contact: AIA Wisconsin, 321 S. Hamilton Street, Madison, Wisconsin 53703; (608) 257-8477/1-800-ARCHITECT.

# The Overwhelming Choice in Floor Underlays.

We've poured our underlays in apartments, condominiums, office complexes, single-family homes and shopping malls. More than 1 billion square feet of Gyp-Crete®, Gyp-Crete 2000™ and Dura-Cap™ have been installed nationwide. For new construction or renovation, they're the overwhelming choice in poured floor underlays. Installed at a fraction of the cost of other cementitious underlays.

Here's why:

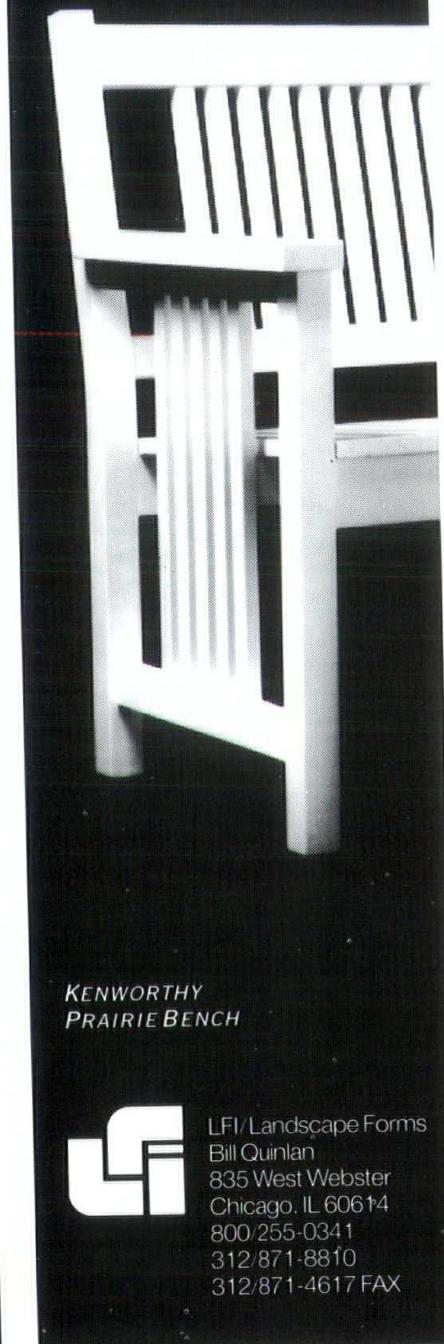

- Sound and fire control
- Accepts virtually all finished floor goods
- Pour over wood or concrete subfloors
- No shrinkage cracks
- Poured from featheredge to 3"
- Accepts foot traffic within 90 minutes
- Fast, efficient installation
- Leveling capabilities

## THE START OF A GREAT FINISH

Before you begin your next building project, check out our great finishes! Fabcon's precast concrete wall panels enable you to respond at your creative best, with a wide range of aggregates, extensive choice of patterns and striking decorative banding. And because Fabcon custom manufactures each order, we can help you design a building that can match its character.

So why choose ordinary precast concrete, when you can create a unique design with Fabcon? Call or write today for a free copy of our Finish Guide or to view our video presentation. It may be the start of a great finish!

PCI Plant Certified-Confirmed Capability to Produce Quality Precast/Prestressed Concrete Products.

# You and Your Architect: An Introduction

**B**uilding in today's market place is a complex undertaking requiring many different skills and products. No two building projects are exactly alike, so there is no single clear-cut path to follow to achieve the appropriate solution to your unique requirements and needs.

Whether you are building your own home or planning a commercial complex, selecting the right architect is important to a successful project. The architect is the one professional who has the education, training, experience and vision to guide you through the entire design and construction process, from helping you define what you want to build to helping you get the most for your construction dollar. Working with other design and construction professionals, architects can help you achieve a well-designed project that meets your needs and works with your budget and time frame.

## Wise Investment

Architects are trained to solve problems in creative ways, translating your needs into square feet and three-dimensional space. With their broad knowledge of design and construction, architects can show you alternatives and options you might never think of on your own.

The architect's services are a wise investment, not an added cost to your project, because:

- A well-conceived project can be built more efficiently and economically. Architects plan your project with you. As your ideas evolve, changes can be made on paper much less expensively than later on when construction is underway. Thorough drawings also make it easier for the contractor to accurately price and build your project.

- Energy efficient buildings can save you money on fuel bills down the road. An architect can design a building to maximize heating from the sun and let in natural light, thus reducing your heating, cooling and electric bills over time.
- The architect can work with your budget and help you select the appropriate materials and workmanship at a fair price. Architects develop the drawings and specifications to help you get bids for construction that are based on your requirements.
- An architect can help you choose materials and finishes that are durable as well as beautiful, saving on frequent maintenance and replacement costs. Architects work to stay abreast of advances in roofing, brick work, floor tiling, paint finishes, etc. Their familiarity with the full range of materials enables them to suggest the appropriate materials for your project.
- Good design sells. A well-designed house has a higher resale value. A well-designed store draws customers. A well-designed work environment attracts employees and increases productivity.
- The architect can make your life easier. Let's face it, building is a long process that is often messy and disruptive, particularly if you are living or working in the space under construction. The architect you hire looks out for your interests and tries to find ways to make that process go smoothly.
- If your project requires engineering or other design services, the architect can coordinate this team of experts so you don't have to. The architect sorts out complex building codes and zoning laws. The architect can help you find qualified construction contractors based on your

requirements. The architect visits the construction site to help verify that the project is being built according to plans and specifications.

## Selection

Architecture firms come in a variety of sizes and types. Each firm brings a different combination of skills, expertise, interests and values to its projects. Statistically, the average firm is made up of nine or ten people. Many firms have one or two architects. Others have staffs of 50 or more. Some firms specialize in one or more project or facility types. Some firms include in-house engineering services (e.g. civil, structural, mechanical or electrical) or other design disciplines (e.g. planning, urban design, landscape architecture or interior design). Many other architects introduce these disciplines into their projects through appropriate consultants.

First-time clients, and even experienced clients facing new situations, have many questions about architect selection. The following are some of the more common:

- *When, in the life cycle of a project, should I bring the architect into the picture?* As early as possible. Architects can help you define the project in terms that provide meaningful guidance for design. They can also do site studies, help secure planning and zoning approvals and perform a variety of other predesign tasks.
- *Should I look at more than one firm?* Usually, yes. The exception, of course, arises when you already have a good relationship with an architect and it makes little sense to change.
- *How do I find potentially suitable firms to contact?* Start building a list of potential architects. Contact other

owners who have developed similar facilities and ask whom they interviewed and ultimately selected. Ask who designed buildings and projects that you've admired or that seem especially appropriate. Get recommendations from friends and relatives who have worked with architects. AIA Wisconsin publishes annual directories of AIA member architects and member-owned firms. AIA Wisconsin also has directories of members interested in residential projects and historic preservation, restoration and adaptive use. In addition, AIA Wisconsin assists public owners establish a complete Qualifications Based Selection (QBS) process for their projects.

- *What information should I request?* Contact each firm on your list. Describe your project and ask if they are available to take it on. If they are, request literature outlining the firm's qualifications and experience. If the office is unable to handle your project, ask if they can suggest another firm. The materials you receive from interested firms might include a letter of interest, brochures, fact sheets, photos of past work and biographical material about key personnel. Look beyond the style of the brochure to determine which firms have the right experience and capabilities for your project. At this point, you should be able to narrow your list to the architects you will interview.
- *Why are formal interviews desirable?* An interview addresses one issue that can't be covered in brochures and printed materials: the "chemistry" between the owner and the project team. It also allows the owner to investigate how each architect will approach the project. Remember, you will be working with the architect for a long time and will want someone with whom you feel comfortable.
- *How many firms should I interview, and how should they be selected?* Most people advise that you interview between three and five

firms, enough to see the range of possibilities but not so many that an already tough decision will be further complicated. Select for interview architecture firms you feel can do your project because of their expertise, or their ability to bring a fresh look to your situation. Treat each firm fairly, offering, for example, equal time and equal access to your site and existing facilities. Ask to meet the key people who will work on your project.

- *What can I realistically expect to learn from an interview? How can I structure the interview to make it as informative as possible?* During the interview, ask a lot of questions. You can learn how the team the architect has put together will approach your project. Ask how the architect will gather information, establish priorities and make decisions. Ask what the architect sees as the important issues or considerations in the project. Evaluate the firm's interest in your project. Evaluate the firm's style, personality and approach: are they compatible with yours? If, during the interview, there is something you do not understand, ask the architect for clarification.
- *How should I follow up?* Tell each firm what you intend to do next and when you plan to make your decision. If you haven't talked with past clients, do so now. Assess both the performance of the firm and the performance of the resulting architecture. You may want to visit existing buildings to see them in use. Notify the selected firm as soon as possible. Remember, conditions change; the firm may not be able to offer the same project team if you must take several weeks or months to decide.
- *On what should I base my decision?* Personal confidence in the architect is preeminent. Then seek an appro-

priate balance among these factors: technical competence, professional service, cost and design ability. Once you've selected the best firm, enter into detailed negotiations of services and compensation. If you cannot agree, begin negotiating with your second choice.

- *Some say that I should select a builder or contractor before selecting an architect. When is that good advice? It works best to select an architect first, then you will have help in understanding how to make the builder or contractor an effective member of the building team.*

However the architect selection process is approached, it is worth taking the time to do it well. Here's some additional guidance:

- You are engaging the services of a professional. You will work closely with the architect through the life of the project; and your relationship may extend to future projects. Invest at least the care it takes to select a financial or legal adviser.
- Yours will also be a business relationship. Find out how prospective architects do business, how they work with their clients, how responsive they are to your management and decision styles, and how well their work stacks up against their clients' expectations. The best way to find out is to talk with other owners for whom the firm has provided professional services.
- Ask questions. Respect the architect as a professional who will bring experience and specialized knowledge to your project. At the same time, don't be afraid to ask the same questions you've asked yourself: What does the architect expect from the project? How much information does the architect need? How does the architect set priorities and make decisions? Who in the firm will work directly with the client? How will engineering or other design services be provided? How does the firm provide quality control during

design? What is the firm's construction-cost experience?

- Be frank. Tell the architect what you know and what you expect. Ask for an explanation of anything you don't understand. The more on the table at the beginning, the better the chances for a successful project.
- Get it in writing. Once you have found the architect, you are ready to put in writing the terms of your agreement on the scope of work, services, schedule, construction budget and architect's compensation. This written agreement can take many forms. The American Institute of Architects has developed a variety of standard contract forms which are used industry-wide. The AIA Wisconsin office in Madison maintains a complete inventory of these AIA standard contract documents.

### **Successful Projects**

The best building projects are created when the client and architect work together as a team. Both you and your architect can take specific steps to help meet your quality, time and budget goals.

Design and building are group activities. Many people and firms come together to do a project; they may not have worked together before and they may not work together again. They collaborate to produce a unique building on a specific site. As the project unfolds, hundreds of individual design decisions and commitments are made. Needs and conditions change; and work is modified. A strong and healthy relationship between owner and architect is essential to keep the project on track.

Design and construction projects typically involve several steps or phases. These may include: programming, schematic design, construction documents, bidding or negotiation with contractors and construction. However, on some projects several of

these steps may be combined; on others there may be additional phases involved.

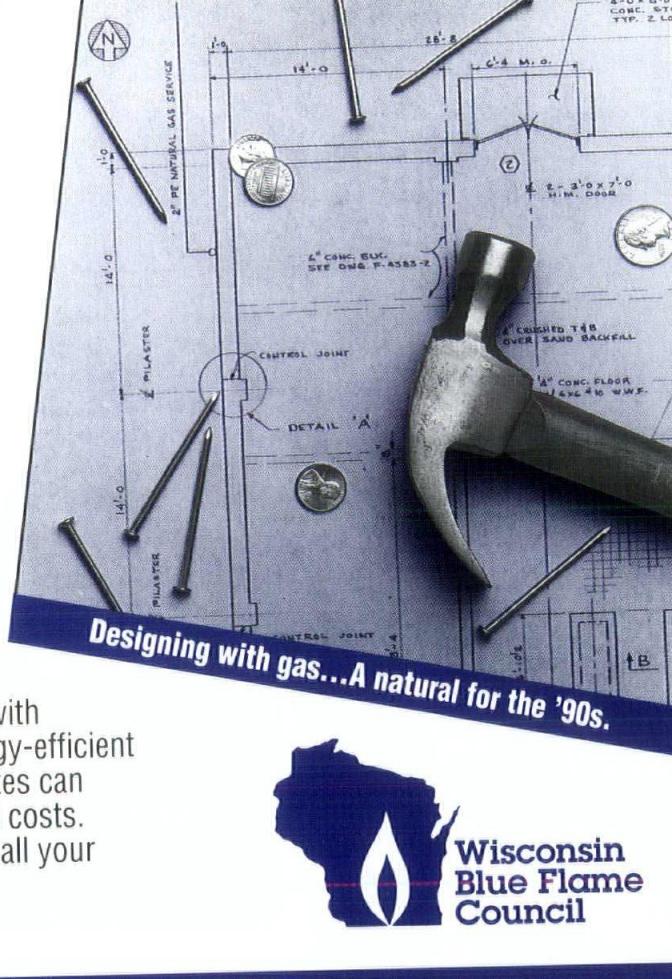

The architect's involvement normally does not stop with the preparation of construction documents. Architects also provide construction administration services. These services may include assisting you in hiring the contractor, making site visits, reviewing and approving the contractor's applications for payment and keeping you informed of the project's progress.

The path to a successful building project is paved with lots of challenges and uncertainty. There are literally hundreds of decisions to be made, decisions which have a strong impact on how the project looks and functions over time.

Experience tell us that successful projects—those that respond to owner needs and aspirations, that are accomplished within schedule and budget and that contribute to the quality of our communities and our lives—result from good clients and good architects who form good professional, business and often personal relationships. These relationships are formed early on and are nourished by clear communications, mutually understood expectations and a willingness of both you and your architect to accept your responsibilities for realizing a successful project. **WA**

## Small Change Could Cost You Big Dollars

—By Roger K. Lewis, FAIA

Copying blank AIA Documents is illegal... and dangerous. The AIA Documents are revised periodically to reflect current case law and the ever-changing practices within the construction industry. Copying an outdated AIA Document—that's missing even a small change or revision—increases your liability and the possibility that you'll pay big dollars to settle a dispute. Don't take chances; order your current AIA Documents from us today.

AIA Documents the foundation for building agreements

# AIA Wisconsin Firm Directory

Design and building are inherently exciting; and there is nothing more satisfying than a successful project. The secret to success lies in the professional, business and personal relationship between building owner and architect. Whether you are building or remodeling your home or planning a commercial, industrial or public facility, selecting the right architect is important to achieving a successful project.

Members of AIA Wisconsin have been selected for major projects across the country and have received many important awards. AIA Wisconsin member architects have assisted thousands of clients with creative solutions to their building needs.

Investing in the professional services of an architect is a wise use of often very limited building resources. A well-conceived project can be built more efficiently and economically. An architect can design a building to maximize natural light, thus reducing heating, cooling and electric costs. The architect can help you select materials and finishes that are durable as well as beautiful, saving on maintenance and replacement costs. Good design pays dividends...a well-designed store draws customers and a well-designed work environment attracts good employees and increases productivity.

If you need the professional services of a qualified architect, you will find a suitable firm in this 1994 *AIA Wisconsin Firm Directory*. The firms listed will welcome the opportunity to discuss your project with you.

The *AIA Wisconsin Firm Directory* includes the following information on each firm: firm name, address, county and telephone and fax numbers; names of the principals or partners of the firm; number of registered architects and total employees; and a description of the firm's practice.

The information contained in the *Directory* was provided by the firms as part of an annual survey of AIA Wisconsin members. It is a roster of firms owned by AIA Wisconsin member architects. To be listed, at least one of the firm's principals or partners must be a registered architect and an AIA Wisconsin member.

You are encouraged to keep the 1994 *AIA Wisconsin Firm Directory* handy for reference throughout the year. Contact the firms listed for further information about their practice and the professional services they can provide for your project. If you have any questions or suggestions regarding the *Directory*, please contact the AIA Wisconsin office: 321 S. Hamilton Street, Madison, Wisconsin 53703; (608) 257-8477/1-800-ARCHITECT.

FAX (414) 563-5545  
County: Jefferson

4213 N. Ardmore Avenue  
Shorewood, WI 53211  
(414) 331-3004  
County: Milwaukee

Helmut Ajango, AIA  
William Hiltner, AIA

Registered Architects: 2  
Total Employees: 6

*Description of Practice:*

Building types break down as 25% residential (apartments, homes), 15% restaurants, 30% churches, 20% restoration and interior design and 10% offices. The firm has practiced in Wisconsin for 25 years and has received honors for its designs. The principal architect has a degree in art, architecture and architectural engineering and the firm strives to carefully and imaginatively combine all three. Of all the different building types, the firm enjoys the churches the most, feeling it is this building type that generally strives for more imagination than some others and wishes to be built for the least cost, giving the architect the greatest challenge.

## JOSEPH W. ALBERT III, AIA ARCHITECT •

PLANNER & NICE GUY  
2718 S. Shore Dr.  
Milwaukee, WI 53207

*Description of Practice:*

Bouril Design Studio is a team of designers dedicated to providing personal service within a creative small firm atmosphere. We have experience in both single family residential and small scale commercial projects. While our portfolio is quite varied, custom residential addition and remodeling projects comprise the largest portion of our work. We also provide construction management services which are an alternative to the traditional design/bid/build process for owners who wish to maintain cost control and continuity throughout the process. Computer modeling is also used extensively throughout the design process to help in three-dimensional visualizations.

*Description of Practice:*

Genesis Architecture provides a full range of architectural services for residential, religious and commercial building types and has received national recognition for its award-winning designs. Innovation and beauty are emphasized in our design work with a special sensitivity to the site, natural use of materials and construction process. Computerized services such as 3-D walk through animation and sun studies are used in conjunction with traditional hand-rendered drawings to fully convey the character of the finished project. Importance is placed on the close participation of owner, architect and building/construction manager to produce successful projects.

John T. Klick, AIA

Registered Architects: 1  
Total Employees: 2

*Description of Practice:*

Klick Inter Arch Design was founded in 1975 and since that time has completed a wide variety of developments including multi-family, recreational, downtown redevelopment, historic renovation, office and retail. Our firm is particularly proud of the 24 historic renovations, 16 of which are historic hotels. Another area of expertise is elderly housing including assisted living developments, a relatively new type of housing which encourages continued independence for the elderly. Klick Inter Arch Design combines both architecture and interior design which provides greater continuity of the development from design through occupancy. Being located in Minneapolis enables us to easily serve our clients located throughout the Midwest.

*Description of Practice:*

Midwest Design & Development Corporation provides integrated architectural/construction management services for commercial clients, with an emphasis on outpatient health care facilities. Responding to a desire expressed by our clients for continuity and a single source of accountability throughout the life of a project, all work is done on a design/build basis. The size of the firm is intentionally kept small, allowing the principals to maintain direct client contact through all phases of a project. The firm is respected for its ability to propose creative solutions for difficult buildings and sites, and to accomplish complex alterations and additions while keeping the client's business completely operational.

Registered Architects: 10  
Total Employees: 17

*Description of Practice:*

Miller Wagner Coenen McMahon has been creatively serving clients for the past 38 years. Our primary aim is to understand each client's building needs and develop the best architectural solution through service and design. We offer traditional architectural and engineering services as well as assistance with feasibility studies, programming, space planning, cost estimating and scheduling. We offer design/build services as well as the design/bid approach. We provide multi-disciplinary expertise and offer full CAD capabilities. We have experience in institutional, educational, correctional and renovation projects. Other areas of expertise include libraries, office buildings, health-care facilities, multi-family housing, governmental, industrial and historic preservation.

*Description of Practice:*

We enjoy working closely with our clients giving form to their dreams. Our clients are homeowners and home builders, school and municipal administrators, church groups, manufacturers, retailers, human and veterinary care professionals. Over the past twenty years we have developed expertise in construction technologies, costs and processes. However, our greatest interest is in listening to and learning from our clients and creating successful environments for them and the general public.

*Description of Practice:*

Potter Design Group, Inc., is founded on quality design and service with the precept of developing projects which are sensitive to budget, program and context. During our quarter-century of practice we have developed an affinity for library, church, municipal, academic, housing, elderly care and adaptive reuse projects. Our collective experience is architecturally centered, although interests in landscape architecture, urban planning, lighting and exhibit design distinguish us. We define ourselves by our ability to respond to many building and design opportunities. Regardless of the project, our commitment to refined architecture is consistent. Our numerous repeat clients and awards confirm our positive contribution to the environment.

*Description of Practice:*  
 Sunarc Studio is a full service architectural firm specializing in environmental architecture, solar energy and space planning. An experienced team of professionals is selected for each project, which gives us the ability to personalize our clients' programs. Quality management starts at the very beginning of every client's interview and carries throughout the design and the project beyond. Areas of expertise have been in historic preservation, renovation, medical, commercial, multi-family and elderly housing. We look forward to the challenge of meeting our clients' programs through an innovative design and the speed of quality service.

*Description of Practice:*  
 A full service architectural firm providing design solution and technical assistance to health care facilities, research and clinical laboratories and environmental and municipal facilities. In-house computer graphics capabilities and specification system. Programming, planning and design services for both new construction and renovation projects. Recent projects include Baylake Outpatient Surgery Center in Sturgeon Bay, addition and renovation to the Madison Metropolitan Sewerage District Complex, Milwaukee County Transit Fleet Maintenance Building and addition and renovation to the UW-Primate Annex building.

Torke/Wirth/Pujara, Ltd. (TWP), is a creative design-oriented architectural firm that also offers in-house master planning, space needs assessments, ADA studies, structural engineering and interior design. Since 1977, the firm has substantially broadened its practice to include a strong client base and award-winning designs in commercial, institutional, retail, financial, religious, day care, health care and historic renovation/adaptive reuse projects. TWP's unusually varied design work is marked by sensitive responsiveness to and research into each client's desires, needs and image of themselves. The firm prides itself on design solutions which meet each project's challenges: its site, program, functional requirements, budget and owner-user expectations.

## Senate Bill 314

*The following is the testimony by Frederick E. Zimmermann, AIA, Chairperson of the AIA Wisconsin Legislative Committee, at the December 16, 1993, public hearing on Senate Bill 314 before the Assembly Insurance, Securities and Corporate Policy Committee.*

I am appearing today on behalf of the 1,200 individual members of the Wisconsin Society of Architects to respectfully request your support for Senate Bill 314. We appreciate this opportunity to outline the reasons why architects and others involved in Wisconsin's design and construction industry believe this important legislation is necessary. Wisconsin architects, along with allied design and construction industry professionals, have supported similar corrective legislation that has been introduced in every session of the Wisconsin Legislature since at least 1983.

SB 314 is not new or radical legislation, but rather remedial and corrective in nature. In 1961, Wisconsin became the first state to enact such a statute of repose for those involved in improvements to real property. It required that actions for damages be brought within six years after construction was completed.

In 1976, in response to an adverse Wisconsin Supreme Court opinion on this statute, the Legislature again approved a revised six-year statute of repose for Wisconsin's design and construction industry. Unfortunately, this new statute of repose failed to include building owners and occupiers as recommended by the Court. In addition, a subsequent opinion determined that the new statute applied only to projects completed after its effective date, resulting in an

inequitable situation for those involved with projects completed prior to 1976.

A 1989 Wisconsin Supreme Court opinion found this most recent statute infirm on equal protection grounds because it did not include building owners and occupiers. Wisconsin now is one of only five states without such specific statutory protection limiting the long tail of liability for those involved in the design and construction of improvements to real property . . . liability that can last for the life of a building and extend for decades and decades.

SB 314 responds to the equal protection concerns of the Supreme Court by including owners and occupiers of improvements along with designers, surveyors, planners, contractors and material suppliers who were covered by the state's prior repose statute. It also makes it clear that the new statute of repose would apply to improvements completed prior to the legislation's effective date, with an exception for damages that have already been sustained. The proposed legislation is carefully drafted in recognition of other possible constitutional concerns in order to withstand future challenges.

SB 314 also would extend the repose period from six years to ten years after the date of substantial completion, with special provisions allowing additional time for damages arising in the tenth year. This proposed extension of the repose period would

provide injured parties additional time to commence a lawsuit. In the 45 states with similar statutes, the average repose period is between seven and eight years. The most frequent statute of repose period among these states is ten years from the date of substantial completion.

Earlier this year, the Wisconsin Supreme Court affirmed that present state statutes, Section 893.43, requiring actions based on breach of contract to be commenced within six years are applicable to construction-related cases. So, if a contractual relationship exists, parties to the contract must bring actions within six years. SB 314 would provide a ten-year period in which to commence actions related to improvements to real property in situations where there is no contractual relationship.

As professionals regulated by the state, architects take our responsibilities to protect the health, safety and welfare of the public very seriously. We design buildings that will be used for a long, long time, leaving us and our estates with virtually unlimited liability. After our involvement during the design and construction phases of a project, we have no control over how the building owner or subsequent owners and occupiers use, abuse, modify and/or maintain the facility. Yet, if something should ever happen during the lifetime of the building, it is almost guaranteed that we will become involved in a lawsuit.

As registered architects, we cannot hide behind some sort of corporate shield. We place our personal assets and those of our families on the line whenever we provide professional

services, and that risk exposure currently lasts for the life of the building. The result is that architects can never really "retire."

SB 314 provides for a very reasonable balance between the interests of potential plaintiffs and potential defendants in construction-related cases. While statistical studies demonstrate that claims filed after ten years are the result of inadequate maintenance by those responsible for the facility and typically result in *no* payment to the plaintiff, these claims often can and do result in substantial legal fees for both the plaintiff and the defendant as well as the loss of time and effort that otherwise could be put to more productive use.

For architects and others involved in Wisconsin's design and construction industry, SB 314 would help to provide some degree of certainty and finality in the administration of our affairs. There comes a time when architects ought to be reasonably secure that the slate has been wiped clean of ancient obligations. We should not have to be called upon to resist a claim when, with the passage of time, evidence has been lost, memories have faded and witnesses have disappeared. In the context of a construction project, the necessary extended record-keeping involving all contract documents, shop drawings, change orders and other documentation establishing the responsibility among many participants (e.g. owner, architect, engineer, general contractor, subcontractor, material suppliers, etc.) is an excessive and perhaps impossible burden.

It is important to understand the exceptions contained in SB 314. The proposed statute of repose would *not* bar legal actions after ten years against persons who commit fraud, conceal a defect, expressly guarantee the improvement for a longer period or are negligent in maintaining the improvement.

The provisions contained in SB 314 are identical to those recommended earlier this year by the State Building Commission as part of its 1993-95 state building program. The State of Wisconsin, as the largest building owner and occupier in Wisconsin, has legitimate economic and risk management interests in the adoption of this remedial legislation. According to the fiscal estimate prepared by the Department of Administration, SB 314 would help save taxpayers \$2 to \$3 million in state insurance costs.

SB 314 is supported by a coalition of the leading design and construction industry organizations in Wisconsin. We all recognize the vital need to recreate a statute of repose that would establish a reasonable limit on the long tail of liability for those involved in the design and construction of improvements to real property.

On behalf of the members of the Wisconsin Society of Architects, I encourage members of this committee to support SB 314 and to report out this important legislation with a favorable recommendation. I would be pleased to respond to any questions you may have at this time. Thank you.

## PROFESSIONALISM... FROM START TO FINISH.

When you call a Marvin distributor or dealer, expect professional service from the beginning. They provide the support you demand, like factory trained personnel, customer service, and complete technical assistance from Marvin's architectural division.

They're backed by the best built line of wood and clad wood windows in America. Marvin makes windows to order, combining technology with craftsmanship to solve your unique design or performance problems.

So consult with your Marvin distributor. They'll work with you on your schedule, not theirs. No matter what stage your project is in.

Professionalism ... from start to finish. Call us.

## Hiring a sheet metal contractor?

**Using the best trained,  
most highly skilled labor  
is your best guarantee for  
maintaining cost control.**

Maintaining the highest standards of quality and efficiency for your building project is no simple task. The trick is to be able to control expenses while avoiding sub-standard work that will wind up costing you extra in the long run.

When you choose a sheet metal contractor, you need to look for the bid that will give you the best value for your construction dollar. And that's where the training and experience of skilled union craftsmen can make the difference.

We offer experience, professionalism and reliability — your best guarantee for meeting deadlines and budgets.

To SEE HOW WE'VE IMPROVED  
THE TILT-WASH WINDOW,  
JUST ADD WATER.

Now, with the new Andersen® DC™ Tilt-Wash window you don't have to sacrifice weathertightness for convenience.

- Revolutionary design handles 8 inches of rain per hour, driven by 43 mph winds, without leaking.
- Unique weatherstripping not only helps to keep window airtight, but makes it easier to operate.
- Easy to clean, too. Tilts into place with the touch of a fingertip.

Call or visit now to see for yourself how well our new window goes through the wash cycle.

**Come home to quality.**

# AZTEC CONCRETE MASONRY UNITS

## TECHNICAL SUPPORT DATA - SPECIFICATIONS SECTION 04200 - UNIT MASONRY

### GENERAL - USES/APPLICATIONS

AZTEC concrete masonry units, highly textured to create deep shadows, offers a beautiful 8" x 8" divided image unlike any other! Exterior and interior walls burst with a clean, strong, symmetrically proportioned pattern. AZTEC masonry units are load-bearing, fire resistant and sound dampening with lasting durability, AZTEC truly reflects strength and aesthetic character on commercial institutional, industrial and residential construction.

### PRODUCT

**UNITS:** Aztec is divided into two symmetrically 8" x 8" split face segments which are offset 3/4". Units may be installed in lieu of regular concrete masonry units for load-bearing and non load-bearing single wythe applications or in lieu of brick for veneer applications.

#### SIZES AND SHAPES:

Stretcher/Flush-end/Steel-sash units.....	W. 12"	10"	8"	4"
Special corner units (16" long).....	W. 8"		8"	
Bond beam units.....	W. 12"	10"	8"	

**INSULATION:** Factory or field\* installed insulated units are available in 12", 10" and 8" sizes.

#### AZTEC MASONRY UNITS:

**MANUFACTURER AND COLOR:** Provide Aztec architectural CMUs as designated on the drawings or indicated in the schedule of finishes. Units shall be manufactured by Best Block Company - (800)782-7708 or (414)781-7200. Select manufacturer's colors: premium group, standard group, natural gray, or specify known color.\* Mortar coloring shall be the same as the designated c.m.u. coloring.

**SIZE AND SHAPES:** Provide nominal face dimensions of 8" high x 16" long by thicknesses shown on drawings.

**CLASSIFICATION:** Units shall conform to ASTM C90 standards, Grade N, Type II, Normal weight.

**STORAGE AND HANDLING:** CMUs shall be kept dry and free from contamination. Units shall be stored on level ground with no double stacking of pallet containers. Units are to be handled to protect faces and edges from chipping.

**INSTALLATION:** Aztec units shall be laid in stacked or running bond\* with 3/8" mortar joints. Decorative side mortar is to be compressed with a 3/8" flat jointer to create a weather-tight, flush joint similar in appearance to the machine scoring. The back side of the wall shall be kept smooth and plumb and the mortar joints shall be tooled.

**EXTERIOR USE:** Provide water-repellent units and mortar manufactured with Dry-Block® integral water-repellent admixture for exterior use. Single wythe, thru-wall units shall be waterproofed with an approved heavy duty water-proofing.

**CLEANING:** Walls shall be cleaned only with a non-acid detergent and low pressure warm water with fiber brush to remove dust, dirt and grime after installation. Excess mortar on faces must be removed daily during installation.

\*Specify selection.

†Depth sizes also available in 3 5/8", 7 5/8", 9 5/8".

#### TO ORDER:

# Welcome to Elevation

*The P.R. idea exchange for the self-advancement of the architect in society*

*Welcome to Elevation, a new feature of Wisconsin Architect magazine.*

*It has become clear after two years of work by the Public Awareness Committee that the best public relations program can only be done by you. No public relations firm can create a lasting image if that image isn't what you really are. And, what you really are is what you do. "Talking your walk" and "walking your talk" in your own way will do far more to elevate our profession than any P.R. firm could do.*

*But, how is this done? How do you explain to people what you do? Where do you find good P.R. material to use? What's the best way to build a strong client/architect relationship? What does the general public want to know?*

*The purpose of ELEVATION is to provide an opportunity for you to share your ideas, experiences and practical suggestions to these and other client/architect relationship issues.*

*ELEVATION is similar to the "Neat Files" you see in Architecture magazine, except the information exchange in Wisconsin Architect is about client relationships not technical details. Architects, managers, interns, clerical people, principals and anyone else concerned with the stature of the architectural profession are encouraged to contribute ideas and practical suggestions for publication.*

*Send your submission to:*

*Wisconsin Architect  
321 South Hamilton Street  
Madison, WI 53703*

## **Written Communications... An Art!**

You may think you are sending a consistent message to the public, but there's something else going on in your organization or firm that can make or break your public image — ordinary, day-to-day letter writing that deals with mundane things like fees, schedules, issues, announcements and collections.

Letters should express friendship. Even letters that deal with tough issues should extend the olive branch. Words like "We have enjoyed working with you" or "It's been our pleasure" or simply "thank you" express friendship. Words of anticipation (We're excited about . . . , we're looking forward to . . . ) also communicate friendship. The emphasis should be on the relationship you're building with the reader. The best way to undermine a tone of friendship is to use legalistic terms. Words that give cause for alarm are "inform," "perform," "implement," "incorporate," "the above-captioned," "per our conversation," "this matter," "transpired" and "herein stated."

The writings of Dale Carnegie stress the importance of speaking in terms of the other person's self-interest. This is important in letter-writing, too. A good way to do this is to express genuine concern for the person, client or project.

Our successes depend largely on our ability to communicate and build relationships with people. Each opportunity we have to write a letter is an opportunity that must not be wasted.

*Sandie Huseby  
Flad & Associates  
Madison, WI*

## **One Public's Perception**

How highly does the general public value architects these days?

James Kunstler, a "public" observer of the products of our planning and design, has this to say: "The American highway is now like television, violent and tawdry. The landscape it runs through is littered with cartoon buildings and commercial messages. We whiz by them at fifty-five miles per hour and forget them because one convenience store looks like the next. They do not celebrate anything beyond their mechanistic ability to sell merchandise. We don't want to remember them. We did not savor the approach and were not rewarded upon reaching the destination, and it will be the same next time, and every time. There is little sense of having arrived anywhere, because every place looks like no place in particular."

You may not agree with his views, but his books are selling fast and his lectures are well attended by a growing "general public" who is upset with its built environment and is looking for answers.

If architects are not valued as much as they think they ought to be, the reasons may be a bit more understandable in this type of light.

# Contract or Torte?

Let's assume you are in the following situation: In 1976, your architectural firm negotiated a contract with a municipality or other public agency calling for your firm to design a substantial public building. The public owner insists upon drawing the agreement and uses the format of AIA Document B141, but inserts many of its own requirements relating to its own needs and objectives, including a requirement that the building be energy efficient. The agreement drafted by the public owner requires you to review the specifications furnished by the owner to ascertain the owner's requirements and based upon those requirements prepare schematic design drawings and documents and a statement of probable construction cost. The agreement requires you to prepare from the approved schematic design studies, for approval by the owner, the design development documents consisting of drawings and other documents to fix and describe the size and character of the entire project as to structural, mechanical and electrical systems, materials and other such essentials, including the energy conservation characteristics of the HVAC system. The development of the schematic design documents and the design development documents is delayed by public controversy relating to the claimed inadequacies of environmental impact statements and other protests of a similar nature. Finally, after some years of delay, the project is given a green light. You furnish the public owner with such design development documents, including the HVAC system design which, among other things, calls for ventilation requirements consistent with the owner's energy conservation objectives of the minimum allowable five CFM per occupant consistent with ASHRAE Standard 62-1981.

The public owner has a staff architect who reviews and approves the design development documents; and you proceed to prepare drawings and

specifications from the design development documents that will set forth in detail the requirements for construction of the entire project. The construction cost is to be used as the basis for determining your compensation for basic services and 75% of that fee is to be earned by performing the schematic design, design development and construction documents phases of your services. An additional 5% of the compensation is to cover bidding or negotiating work and 20% is to cover services rendered in connection with the construction phase of the project.

The owner moves its operations into the new building in 1986, but the public employee occupants who never were in favor of the move complain about the indoor air quality in the new building. Outside consultants, including those available from public agencies, carefully analyze the quality of the indoor air and find it within all acceptable limits. The occupants also complain of the smell of diesel fumes, although the air sampling and monitoring reveal no contaminants in the indoor air.

You and your engineering subconsultant work diligently with the owner to attempt to ameliorate the complaints of the employee occupants and conclude that the diesel exhaust odor comes either from trucks whose motors are running at the loading dock or from trucks across the street at the trucking company. You recommend the design and installation of rooftop air chutes so that the air intake louvers are elevated to roof level to avoid the diesel fumes. You work with the owner for six years without additional compensation to solve occupant complaints about the quality of indoor air during which time the owner also hires outside consultants to test indoor air quality and review the HVAC system. Indoor air tests are well within acceptable limits and a recognized national expert hired by the owner calls the

system as designed and installed "state-of-the-art," but recommends that the occupants be given an opportunity to express their specific complaints regarding indoor air quality and to recommend additions or modifications to the HVAC system. The owner hires an engineering firm who interviews occupants and then recommends that the amount of outdoor air be increased from 5 CFM per occupant to 15 CFM per occupant and that other equipment be added to the system to improve ventilation, all at a cost of \$1,700,000.

The owner decides it would like to purchase the improvements recommended but has budget constraints. It files an arbitration claim against you seeking the recovery of \$1,000,000 to help it pay for the additions and improvements it desires. At the time the arbitration claim is filed, it has been 8½ years since you delivered the construction drawings and specifications for the HVAC system to the public owner, but just under six years since the public employee occupants first began complaining of the quality of the indoor air. During that 8½ year period, several of your key professionals have died, as well as the staff architect who reviewed and approved the HVAC system for the public owner.

Statute of limitations issues are immediately apparent. You decide to commence an action to have a court bar the arbitration proceeding on the grounds that the claim is time barred by the applicable statute of limitation. There are two applicable statutes. One is the statute of limitations governing contract actions which requires that an action be commenced within six years of the date of the breach of the contract. The other is the tort statute of limitations which requires that an action be commenced within six years of the discovery of any injury or damage. You firmly believe that the contract statute of

*limitations applies because the public owner claims in its arbitration documents that you negligently performed your contract which the public owner drafted. Further, the public owner dictated the energy conservation requirements which you designed into the HVAC system. You are convinced the owner now desires a different system because of occupant complaints about the indoor air quality.*

*If the contract statute of limitations applies, the date of the breach controls the date that the statute of limitations begins to run and that date is most likely the date that the design was furnished to the owner, more than six years before the commencement of the arbitration proceeding. On the other hand, if the tort statute of limitations applies, the statute of limitations begins running when the public owner "discovered" your negligent act or omission, or in the exercise of reasonable diligence, should have discovered it. The law generally has not permitted the recovery of damages in tort for purely economic losses as distinguished from injury to person or damage to property. Such economic losses are generally resolved in contract actions, particularly where two sophisticated parties contract for the delivery of particular goods or services. However, a few cases have held that an architect may be sued either in contract or tort for the negligent performance of services.*

*Is the arbitration claim brought against you by the public owner barred by the statute of limitations?*

\* \* \* \*

A case recently decided by the Wisconsin Supreme Court would suggest strongly that the arbitration claim against you is time barred by the statute of limitations applying to contracts. In *C.L.L. Associates v.*

*Arrowhead Pacific Corp.*, the court held that an action against a contractor for the negligent performance of a construction contract is subject to the contract statute of limitations. In the *C.L.L. Associates* case, C.L.L. filed suit against several entities connected with a two six-story apartment construction project including a contractor that C.L.L. alleged had breached the construction contract by failing to include structural support within the walls of the buildings and by installing defective windows. The trial court held that C.L.L.'s action was time barred because it was commenced more than six years after the last possible date that the contractor could have breached the construction contract. C.L.L. appealed to the Wisconsin Supreme Court arguing that the statute of limitations should not begin running until the contract breach was discovered. The Wisconsin Supreme Court held in favor of the contractor and dismissed the case.

The Wisconsin Supreme Court took the opportunity to discuss the difference between the contract statute of limitations and the tort statute of limitations. The court observed that in Wisconsin, a 90-year line of precedent holds that an action for breach of contract accrues and the statute of limitations begins to run from the moment the breach occurs. This is true whether or not the facts of the breach are known by the party having the claim. The court noted that concerning tort actions, in contrast to contract actions, Wisconsin has adopted a "discovery rule." Tort claims accrue and the statute of limitations begins to run on the date that the injured party discovers or with reasonable diligence should have discovered the tortious injury, whichever occurs first.

The Supreme Court noted that tort law has generally been viewed as serving three broad social purposes: 1) tort law shifts the losses caused by

a personal injury to the one at fault, 2) by so doing, tort law seeks to deter unsafe behavior and 3) tort law creates a mechanism to distribute losses widely in compensating the victim. The distribution of losses occurs through liability insurance premiums and increases in consumer prices.

The court noted that the modern trend has been to relax the statute of limitations with regard to torts so that victims may receive compensation. The discovery rule applicable to tort actions raises two conflicting public policies: 1) the policy of protecting potential defendants from stale and fraudulent claims and 2) the policy of protecting meritorious claimants by allowing them an opportunity to seek legal redress for their injuries. Accordingly, the court has already concluded that in the tort context, the injustice of barring meritorious claims before the claimant knows for the injury outweighs the threat of stale or fraudulent actions.

The court held that public policy favors the current rule that the contract statute of limitations begins to run at the time of the breach. Contract law, unlike tort law, deals primarily with the enforcement of private promises and not with loss distribution. The absence of liability insurance for contract defendants increases the need to protect them from stale or fraudulent claims. Further, while tort claimants generally have minimal control over their risk of loss due to tortious injury, a contract claimant often has a significant amount of control over its risk of loss. For example, original owners and financiers of buildings have the choice of whether to build inexpensive buildings or whether to use inexpensive materials. They have the choice as to whether to use an architect for field inspections and to require warranties, retainages and punchlists. Hence, the increased ability of potential contract claimants

to protect themselves in the first instance lessens the need for an expansive contract statute of limitations.

The decision of the Wisconsin Supreme Court in *C.L.L. Associates* must be contrasted with the recent decision of the Wisconsin Court of Appeals in *Milwaukee Partners v. Collins Engineers*. Milwaukee Partners purchased an office building and hired Collins Engineers to inspect it to determine whether it was structurally sound. Collins Engineers issued a report indicating no conditions were found which significantly reduced the load carrying capacity of the structure. Milwaukee Partners alleged that it purchased the building in reliance upon the report of Collins Engineers and that when it attempted to sell the building, engineers hired by the prospective purchaser found that the building was not structurally sound and was not structurally sound on the date Collins Engineers inspected the building.

Collins Engineers sought to have the court dismiss the action brought by Milwaukee Partners against it on the grounds that the action was for a breach of contract and that the statute of limitations had run even though Milwaukee Partners had not discovered the alleged breach of contract until recently. While the trial court agreed that the action was barred by the contract statute of limitations, the Wisconsin Court of Appeals reversed the trial court, holding that Milwaukee Partners' suit alleged a failure to exercise due care in making the inspection and that such an allegation constituted a claim in tort. Under the discovery rule, the action in tort could be brought within six years of the discovery of the injury or damage. While the Court of Appeals recognized that Collins Engineers had performed its services pursuant to a contract with Milwaukee Partners, the court held that the contract did not create the duty of due care, but

merely furnished the occasion for the fulfillment of that duty to exercise due care. The Court of Appeals held that the complaint of Milwaukee Partners stated a claim in tort and, under the discovery rule, the action was timely filed even though it was filed more than six years following any alleged breach of contract. It also held that the economic loss rule should not bar an action in tort against an engineering firm which is accused of negligently performing engineering services.

Which of the decisions controls your hypothetical case? *C.L.L. Associates* holds that a contract between two sophisticated parties should be subject to the contract statute of limitations even though one of the parties (a contractor) failed to exercise due care in the performance of that contract. If *C.L.L.* is controlling authority, when applied to your case it would bar the public owner's arbitration against you because the arbitration was commenced more than eight years after the public owner accepted your final design of the HVAC system, which is in excess of the contract statute of limitations. *Milwaukee Partners* is authority that would permit the public owner to commence the arbitration against you within six years of its "discovery" of any injury or damage, which the owner argues occurred only when the public employee occupants began complaining about the quality of the indoor air, which was less than six years before the arbitration was commenced.

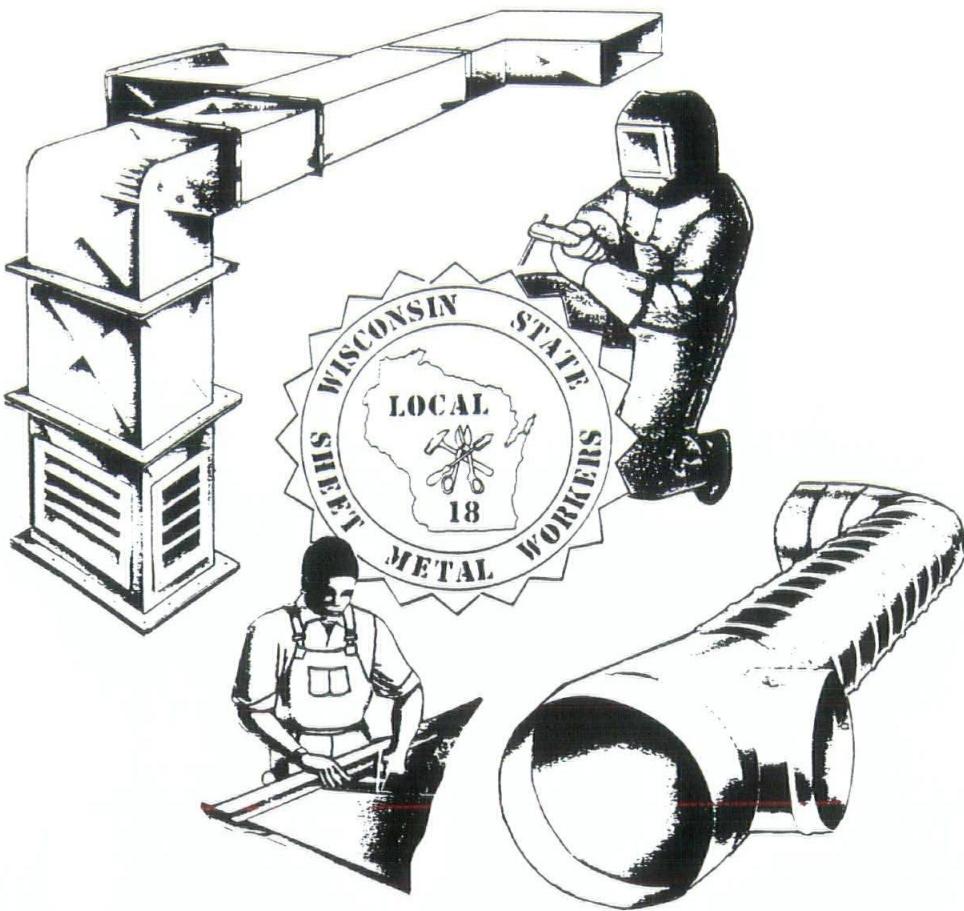

In addition, since the public owner only seeks damages to enable it to purchase additions or modifications to the HVAC system, it is seeking the recovery of an economic loss and it has sustained no personal injury or property damage. The economic loss doctrine has been adopted in Wisconsin as is evident from *Sunnyslope Grading, Inc. v. Miller, Bradford and Risberg, Inc.* Even as recently as

1992, the federal courts in Wisconsin anticipated that Wisconsin would apply the economic loss rule to architectural or engineering services rendered pursuant to a contract between two sophisticated parties. That is precisely what the federal court held in *Wausau Paper Mills Company v. Chas. T. Main, Inc.*

This scenario is a realistic picture of the statute of limitations issues faced by Wisconsin architects. Wisconsin has no statute of repose which would simply bar an action against an architect or engineer after a certain period of time has lapsed. Either the contract statute of limitations will apply, running from the date of breach, or the tort statute of limitations will apply, running from the date of "discovery" of the alleged negligence or from the date the aggrieved party, in the exercise of reasonable diligence should have discovered the injury or damage, whichever is earlier.

Hopefully, the rationale the Wisconsin Supreme Court expressed in *C.L.L. Associates v. Arrowhead Pacific Corp.* will be applied to architects and engineers even though the Court of Appeals in *Milwaukee Partners v. Collins Engineers* has approved the application of the tort statute of limitations to the rendition of engineering services. When architectural or engineering services are performed pursuant to a written contract between two sophisticated parties, there is no reason why the parties should be relieved from pursuing the remedies under contract law.

**EDITOR:** The author is senior partner at Kay & Eckblad, S.C., Madison, and has spent two years as a government lawyer, two years as a criminal prosecutor and 32 years as a civil trial lawyer. He has been involved in product design and manufacturing, building design and construction and environmental cases.

## Claims Prevention

Claims against architects are way down, from a high of 42 claims per 100 insured firms in the mid-80's to 26 claims per 100 firms today. When CNA/Schinnerer looked at 1992 data, we found that 57 percent of claims were brought by owners and 19 percent were brought by others actively involved in design and construction. In other words, fully 76 percent of claims are brought by people the architect knows and interacts with during the design and construction of a project. So the power to produce change, either good or bad, rests in the architect's hands.

Looking at the data another way, 74 percent of the claims brought against architects involve property damage, and of the 26 percent of the claims that involve bodily injury, 71 percent are brought by the building's users.

It can be said the 74 percent of the claims fall somewhere within the architect's technical expertise. They still may be preventable after substantial completion, especially when you consider that 68 percent of all claims are filed within 3 years after substantial completion, while the rest are not resolved fully for another 3 to 5 years.

Another view of these same claims shows that 75 percent are closed without any indemnity payment by the insurance company and that 70 percent of the time the architect makes no indemnity payment from the firm's deductible.

The lessons to be learned are:

- The better architects are at client management, the less likely they will be sued.

- The better architects are at project management, the less likely they will be sued.
- The better architects are at managing the overall politics of practice, the less likely they will be sued—and the less likely they will have to pay.

To CNA/Schinnerer, this means that if architects can recognize and analyze risks, develop and implement strategies to manage those risks and then communicate those strategies assertively and comfortably to the client (and, when appropriate, to the contractor), claims will fall. Those claims that do remain will be much more defensible.

The key to avoiding claims is assertive practice. There is too much evidence to suggest otherwise. Following are a few examples.

\* A firm in the West has an extensive practice, including retail stores. At the end of each project for a particular client, the firm convenes the whole design and construction team along with the client. They review the building, and if anything is wrong, they decide what needs to be done to put the project right.

Then they rectify each problem with each member of the team. The architect, engineers, contractors and owner absorb their own shares of cost of rectification. The result: no lawyers, no lawsuits.

\* A firm in the South did a small commercial project that required a food cooler to maintain a temperature of 45 degrees. Unfortunately, the

wrong insulation was specified. On activating the cooler, it became clear immediately that it wasn't working.

The architect called CNA and did a quick joint review. Everyone agreed: the wrong insulation had been specified. So the architect went to the owner and took steps to correct the situation right away. The owner paid for the better insulation that would have been needed anyway, and the architect paid to have the change made. The result: no lawyers, no lawsuits.

\* A jumbo A/E firm in the North did a \$50 million project funded by a \$56 million public bond issue. The goal of the project was to design a vibration-free environment to support a science center. It didn't happen. The center vibrated unacceptably. The structural engineer was uninsured. The client was a key client. The construction manager was on the client's building board. If that were not enough, it would cost some \$2 million to make things right. There would be a public debacle if things were not resolved quickly through the preclaims assistance program.

The owner said, "Thanks to you and the members of your firm for helping us bring a potentially disastrous situation to a very amicable and satisfactory conclusion. Your acknowledgment of the problem, extensive redesign efforts and commitment to keep the project moving were very instrumental in the satisfactory resolution of this problem. Thanks again for displaying a true team spirit on this project."

The architect said, "It is my belief that this potential claim was settled for the absolute minimum amount. It was settled without litigation, without significant legal fees and in a manner that has maintained an

excellent client relationship. I wish to thank and commend CNA for its flexibility in approaching this situation and for conducting the negotiations to a satisfactory solution."

Given all this, how does CNA/Schinnerer foster assertive practice even more?

Yes, we support tort reform. Yes, we promote mediation. Everything we are doing is making a dent. But in our society, the people who make money are the ones who take on reasonable risks and manage them reasonably. We designed a loss-prevention credit for professional liability insurance that allows a firm to design a risk management program specific to its needs. We increased the number of professional liability courses offered. Continuing education is a real necessity; practice is just not taught in schools.

We were heavily involved with the AIA as it wrote the 11th edition of *The Architect's Handbook of Professional Practice* and are again as it produces the 12th edition. In both editions, we have one goal: to encourage assertive practice, from total quality management to partnering and back.

The AIA, the Association of Collegiate Schools of Architecture and CNA/Schinnerer have teamed up to present the Professional Practice Summer Institute, in which design professors and practice professors get together to illustrate ways to weave practice issues into the design studio, design into practice seminars and otherwise strengthen architects' design and practice skills.

However, the challenge still exists. A professor called recently and asked for a lecture to scare his kids. Instead, what we tell students and architects in

lectures and in writing is that assertive practice demands confidence. Scared architects are useless to themselves and their clients.

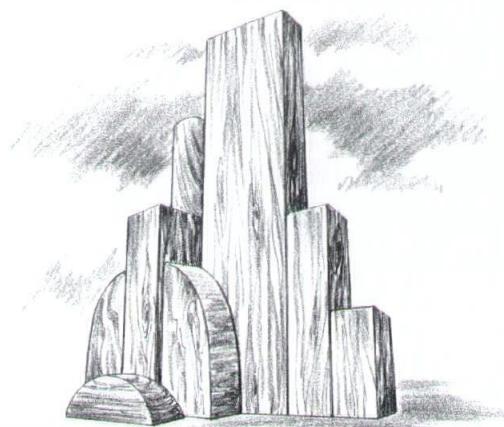

Students still are graduating unprepared to practice. One student stopped a presentation to ask, "What is A201?" He was four months away from graduation. Another student said, "Clients, clients, clients...All you are talking about is working with clients. What about my design's integrity?"

When architects are asked if they have been trained as arbitrators or mediators, there are no hands raised. There is still a lot of work to do.

The AIA's Risk Management Committee supports the concept of assertive practice. In a profession that must balance the powerful changes in technology with the new complexion of the economy and marketplace, it is more important than ever before to keep abreast of new practice techniques and opportunities. The AIA and its Risk Management Professional Interest Area are an excellent place to start. Through vehicles such as the PIA newsletters, loss-prevention and other seminars and committee meetings, both national and local, architects are discovering new ways to provide better client service and stay one step ahead of the competition.

# BLOCK TALK

## DECORATIVE BLOCK

The fact is decorative concrete block is one of the most economical and versatile building materials around. Why? Because it's strong, durable and low maintenance. And our decorative block comes in a variety of rich textures and colors for both interior and exterior treatments. One last fact to consider: all concrete block is not created equal. That's why it's important to choose block from Waukesha Block Company. Not only is our block strong, it's lighter... with exceptionally true dimensions.

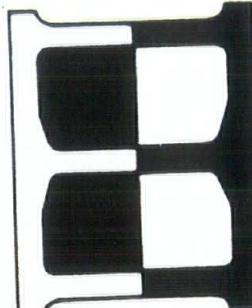

Decorative block from Waukesha Block Company. Concrete evidence that's stacked in your favor.

"When we're ready to start construction, we know our Waukesha Block will be there... right on schedule. They keep their promises."

Bill Dentinger - Mason Contractor

"Decorative block from Waukesha Block comes in a variety of colors and textures. We're excited about the design options and quality it offers us and our customers."

Bill Baesemann - Kings Way Homes

**Golden Award**

John P. Jacoby, FAIA, Menomonee Falls, has been selected as the recipient of the 1994 Golden Award by AIA Wisconsin.

The Golden Award is the highest honor AIA Wisconsin can bestow on one of its members. Its purpose is to recognize individual architects who have performed most distinguished leadership and service on behalf of the statewide professional organization over an extended period of time and have advanced the cause of the profession in providing inspiration to their fellow practitioners.

Jacoby's award was approved by the Board of Directors at its December meeting in Milwaukee. It will be formally presented to him on June 7 at a special luncheon program held in conjunction with the 1994 AIA Wisconsin Convention in Madison.

In recognition of his many contributions to the profession of architecture in Wisconsin, John Jacoby is the eighth recipient of the Golden Award. Previous Golden Award recipients include: David E. Lawson, FAIA; Paul H. Graven, FAIA; Mark A. Pfaller, FAIA; Wayne E. Spangler, FAIA; Leonard H. Reinke, FAIA; Nathaniel W. Sample, FAIA; and Harry A. Schroeder, AIA.

**1994 Convention**

With the theme *REBUILDING THE FUTURE*, the 1994 AIA Wisconsin Convention & Building Products Exposition will focus on the opportunities and challenges facing architects and architecture as we approach that point in American architectural history when the era of building shifts to the era of rebuilding. The 1994 Convention will be held June 7 & 8 at the Holiday Inn Madison West.

The trend in national and state construction activity clearly indicates that by the year 2000 additions, renovations and extended use projects will comprise more than 50% of the total construction volume. "The next few years will be critical as Wisconsin architecture evolves to embrace the significant changes in attitudes, skills and knowledge required to practice in the era of rebuilding," according to Charles J. Quagliana, AIA, Madison, chairperson of the 1994 AIA Wisconsin Convention.

The 63rd annual statewide Convention has been designed to address these issues and more. The Convention Committee has been meeting regularly since early August to assemble an outstanding two-day program of inspirational keynote speakers, educational professional development seminars and many other special events.

This year's Convention will open with keynote addresses by Tom Fisher, AIA, and Donovan Rypkema. Fisher, editor of *Progressive Architecture* and *Building Renovation*, will help set the stage by introducing the issues, ideas and trends related to the practice of architecture in the next millennium. Rypkema will tie together the important concepts of place, community, economic development and preservation as a model for success in the next century.

The closing general sessions will feature Peter Calthorpe, noted author of *The Next American Metropolis: Ecology, Community and the American Dream* and *Sustainable Communities*, and a wrap-up panel discussion featuring architects Jack Waite, AIA, Michael Chusid, AIA, and Carol Nelson, AIA.

In between these opening and closing keynote addresses, the 1994 AIA Wisconsin Convention will offer professional development seminars on a wide array of topics. These nuts-and-bolts seminar sessions will cover issues such as the impact of ADA on rehabilitation and adaptive use projects, sustainable architecture and the environmental impact of building material selection, a case study of an urban neighborhood revitalization project in Milwaukee and more. Seminar leaders include Wilbert Hasbrouck, FAIA, Harry Hunderman, AIA, and keynote panelists Waite, Chusid and Nelson.

And that's not all! The annual *Construction Industry Reception* will feature displays of the latest design and construction industry products and services in the Trade Center at the Holiday Inn. You also will want to participate in the Annual Meeting of AIA Wisconsin and attend the Golden Award Luncheon. In addition, following the closing general session, a number of small-group hands-on sessions on special topics, such as comprehensive condition assessments and digital documentation, are scheduled.

Mark your calendar and plan now to participate in the 1994 AIA Wisconsin Convention on June 7 & 8 at the Holiday Inn Madison West. For additional information on *REBUILDING THE FUTURE*, call (608) 257-8477 or 1-800-ARCHITECT.

Left, John P. Jacoby, FAIA

## Statute of Repose

On December 16, the Assembly Insurance, Securities and Corporate Policy Committee, chaired by State Representative Alvin Baldus (D-Menomonie), held a public hearing on Senate Bill 314. This important remedial legislation would restore Wisconsin's statute of repose for those involved in the design and construction of improvements to real property.

SB 314 is supported by a coalition of the state's leading design and construction industry organizations, including AIA Wisconsin. Wisconsin is now one of only five states without such a statute to limit the "long tail" of liability for those involved in building projects. SB 314 would bar legal actions against architects and allied professionals after ten years from the date of substantial completion.

Wisconsin architects and other supporters of SB 314 made a strong showing at the public hearing. Assembly Insurance Committee members also have received many telephone calls and letters from architects encouraging them to vote in support of SB 314. AIA Wisconsin representatives at the public hearing included Fred Zimmermann, AIA, Madison; John Kolander, AIA, Oshkosh; Richard Eschner, AIA, Shorewood; Nathaniel Sample, FAIA, Madison; Modesto Tavarez, AIA, Madison; Marvin Christianson, AIA, Milwaukee; Bruce Kornitz, Milwaukee; Lisa Kennedy, AIA, Whitefish Bay; Daryl Dean, AIA, West Allis; Joseph Powelka, AIA, Sun Prairie; Michael West, AIA, Fox Point; A. James Gersich, AIA, Madison; Kay Kornovich, AIA, Madison; and Ross Potter, AIA, Madison.

Testimony in opposition to SB 314 was presented by representatives of the Wisconsin Academy of Trial

Lawyers, Wisconsin State AFL-CIO, Wisconsin Citizen Action, Center for Public Representation and the Litigation Section of the State Bar of Wisconsin.

AIA Wisconsin, along with other members of the Wisconsin Statute of Repose Coalition, is working hard to get a favorable recommendation and vote for SB 314 out of the Assembly Insurance Committee. The last regular floorperiod of the Wisconsin Legislature for the 1993-94 session goes through March 25, so it is vital that SB 314 gets scheduled for debate on the floor of the Wisconsin Assembly prior to the end of this floorperiod. The Wisconsin Senate approved SB 314 on a 20-13 vote in early October.

How can you help? Call, write and otherwise stay in regular contact with your State Representative to encourage them to support SB 314. If you have any questions or suggestions, please contact Bill Babcock at the AIA Wisconsin office in Madison.

## Legislative Action

The Wisconsin Legislature is back for the final regular floorperiod of the 1993-94 session. With over 1,400 bills introduced so far this legislative session, there is no shortage of legislative issues and proposals that could have a direct impact on the business and practice of architecture. This also means that there will be many opportunities for AIA Wisconsin members to get actively involved in the legislative process.

The AIA Wisconsin Legislative Committee meets regularly in Madison to monitor and to develop strategies for influencing proposed state legislation and administrative rules that affect the profession and your practice. Liaison committees also have been established with the

Division of Safety and Buildings at DILHR and the Division of Facilities Development in the Department of Administration.

Of critical importance if we are to achieve our legislative goals this session is the active participation by all 1200 members in the legislative process. You are encouraged to contact the AIA Wisconsin office if you are aware of any proposed or existing legislation that should be addressed. The Legislative Committee also encourages you to "adopt" a state legislator or two and make them aware of the issues of importance to Wisconsin's design and construction industry.

Utilizing this broad grassroots network of direct member/constituent contacts can assist the profession in achieving its legislative priorities, such as the enactment of a new statute of repose (see related articles on SB 314). Get to know your own State Senator and Representative by communicating with them regularly and by inviting them to visit your office or to participate in the groundbreaking ceremonies of projects in their district. This ongoing contact will help make them more receptive when you ask for their support on a particular issue.

In addition, there are several other opportunities for you to participate in the political/legislative process that will shape the future of your profession . . . the Wisconsin Society of Architects/Political Action Committee (WSA/PAC) and the WSA Conduit Fund.

The WSA/PAC was established in 1978 to encourage the election of candidates for state office who are sensitive to architecture and to legislative matters affecting the design and construction industry. It is an independent, voluntary and bipartisan group of individual

architects with a sincere interest in improving government through active involvement in the political process. As a result of personal contributions from members like you, the WSA/PAC has been able to make contributions to campaign committees in recent legislative elections. While direct individual contributions are also important, a contribution from the WSA/PAC is recognized by these candidates as support from the entire architectural profession and helps make architects "players" in the political process.

In October, 1992, the Board of Directors authorized the establishment of a WSA Conduit Fund. Conduits are similar to PACs in that the individual contributions can be bundled up for distribution to specific candidates, but contributors to a conduit get to direct their campaign contributions and candidates receiving conduit funds get to count them as contributions from individuals. So, it really is the best of all worlds...the profession is seen as a "player" in the process, contributors maintain control over their Conduit Fund account and candidates get to count conduit contributions as coming from individuals. If you are interested in participating in the political process in this way, please contact the AIA Wisconsin office for more information and a pledge card.

### **QBS Facilitator**

Carol A. Williamson has joined the AIA Wisconsin staff as the new QBS Facilitator. In this position, Carol will assist local government and school district officials throughout Wisconsin in establishing a qualifications-based selection (QBS) process for selecting architects and consulting engineers for their projects.

AIA Wisconsin initiated the QBS program for local officials in 1986. The Wisconsin Association of

Consulting Engineers (WACE) became partners in this unique public-service program the following year. Now, similar QBS programs have been established by AIA and ACEC chapters in 16 other states.

Prior to joining the AIA Wisconsin staff, Williamson was the Executive Director of the Portage Chamber of Commerce. Previous experience also includes serving as the Executive Director of the Hayward Chamber of Commerce and as a member and treasurer of a local school board. The QBS Facilitator position is funded jointly by AIA Wisconsin and WACE.

If you have questions about the QBS program, please contact the AIA Wisconsin office.

### **Fellowship**

With the exception of the AIA Gold Medal, advancement to Fellowship is the highest honor The American Institute of Architects bestows upon one of its members. Elevation to Fellowship not only recognizes the achievements of the architect as an individual, but also elevates before the public and the profession a model architect who has made significant contributions to architecture and society.

Fellowship is granted to architects who have shown distinction in fulfilling the objective of the Institute. These five "objects" or categories for advancement include the following:

- *To promote the aesthetic, scientific and practical efficiency of the profession.* Fellowship in this category is granted to architects who have produced distinguished bodies of work through *design, urban design, preservation or practice* of architecture. This may be accomplished through individual or organizational effort. Works submitted may

be of any size, for any client, of any scope and reflecting any type of architectural service, including project management and firm operations.

- *To advance the science and art of planning and building by advancing the standards of architectural education, training and practice.*

Fellowship in this category is granted to architects who have made notable contributions through their work in *education, research or literature.* Work in education may be teaching, research (including inventions), administration or writing, and should have a lasting impact, be widely recognized and provide inspiration to others in the field and the profession.

- *To coordinate the building industry and the profession of architecture.*

Fellowship in this category is granted to architects who have actively, efficiently and cooperatively *led the construction industry, the Institute or related professional organizations* over a sustained period of time and have gained widespread recognition for the results of their work.

- *To insure the advancement of the living standards of people through their improved environment.*

Fellowship in this category is granted to architects who have made notable contributions in *public service or in government or industry service* through leadership in the development of civic improvements and needed governmental projects, including such elements as conservation, beautification, land use regulation, transportation or the removal of blighted areas, or who have clearly raised the standards of professional performance in these areas by advancing the administration of professional affairs in their fields.

- *To make the profession of ever-increasing service to society.*

Fellowship in this category is granted to architects who have made notable contributions to the public good

beyond the scope of normal professional activities. Achievements may be of a kind that transcend the other categories for advancement—to serve society or humanity in a unique and important manner.

AIA Wisconsin is fortunate to have 14 Fellows among its membership. These individuals comprise the state's Fellowship Committee. The Fellowship Committee meets each year to identify Fellowship candidates and to assist candidates develop their nomination portfolio. The following are AIA Wisconsin members who are Fellows, with the year of their advancement indicated in parentheses:

Ronald Gene Bowen, FAIA, (1988)  
Joseph H. Flad, FAIA (1969)  
Paul H. Graven, FAIA (1978)  
John P. Jacoby, FAIA (1976)  
David T. Kahler, FAIA (1983)  
David E. Lawson, FAIA (1985)  
Gordon D. Orr, Jr., FAIA (1979)  
Mark A. Pfaller, FAIA (1972)  
Leonard H. Reinke, FAIA (1979)  
Nathaniel W. Sample, FAIA (1974)  
George A.D. Schuett, FAIA (1977)  
Wayne E. Spangler, FAIA (1987)  
Allen J. Strang, FAIA (1967)  
William P. Wenzler, FAIA (1971)

Any AIA member in good standing for ten years or more is eligible for advancement. Fellowship candidates can be nominated by the AIA Wisconsin Board of Directors, by five or more Fellows or by ten or more AIA members. For further information, advice or assistance, please contact the co-chairs of the AIA Wisconsin Fellowship Committee: Ron Bowen, FAIA, at (608) 238-7626 or Wayne Spangler, FAIA, at (715) 234-9056.

### State Awards

Governor Tommy Thompson has announced the winners of the 1993 State Building Program Design and Construction Awards.

William Wenzler & Associates Architects, Inc., Milwaukee, was selected to receive the *Architectural Design Award/New Construction* award for its design of the Irvin L. Young Auditorium at the University of Wisconsin-Whitewater. The facility houses a 1,500-seat theater for dance, stage and musical events, multi-purpose space for campus-wide functions as well as administrative and support programs. The Wenzler firm also was recognized for its efforts in working with the contractors to keep this important project within the budget established by state support and private contributions.

Seymour Davis Seymour, Eau Claire, received the *Excellence in Architectural Design Award/Remodel or Addition* award for its design of the Information and Technology Resource Center Addition and Remodeling project at the University of Wisconsin-Eau Claire. This facility is one of the most prominent buildings on the Eau Claire campus. The architect was recognized for an addition that blends so well with the existing materials and design that it appears to have been part of the original design and construction.

During the awards presentation at the State Building Commission meeting in December, Governor Thompson remarked, "Excellence in design and construction is the result of professional skill, hard work and extra effort and teamwork put forth by architects, engineers, construction contractors and state staff responsible for overseeing the projects." The award-winning projects are nominated by state agencies using the facilities.

### Champion Liar

BURLINGTON (AP) — An Appleton architect's whopper about how his son's pickup truck was designated a wetland took top honors in the Burlington Liar's Club 64th annual competition.

Curtis Biggar [AIA], taking his first shot at a contest that draws entries from around the world, beat out more than 200 other fibbers to win the 1993 competition.

Biggar, the newly dubbed World Champion Liar, said he'd almost forgotten the tale he submitted in April. As the father of two sons who love to hunt, Biggar said he was inspired by occasional irritation with the state Department of Natural Resources.

He said he mixed that frustration with a bit of humor when he concocted the prize-winning tale:

"It was so wet this spring that cattails grew in my son's pickup. The DNR spotted him parked in a highway rest stop one afternoon. After careful consideration, they declared his truck a wetland and impounded the vehicle. A court injunction allowed him to drive the truck, under the stipulation that it be clearly identified with 12-inch lettering on each side and both ends as a moveable wetland, with the condition that he could not fill his truck box unless he received a variance from all districts in which he could drive the pickup truck."

For submitting the winning lie, Biggar, 57, will receive a certificate, but it's unlikely he'll hang the award in his office.

"I'm a registered architect. My whole job is to say 'trust me,'" he said.

But in his spare time, Biggar said he does some creative writing and occasionally likes to take a more serious subject and sprinkle it with a little humor.

### (More) Alphabet Soup

The Construction Specification Institute (CSI) now offers an opportunity to add yet another set of letters after one's name: CDT, Construction

Document Technology; CCS, Certified Construction Specifier; and CCPR, Certified Construction Product Representative. Each designation requires the individual to pass a certification exam. If you want to know more about registration for the programs, contact a member of your local CSI chapter or the certification department of the national office in Virginia at (800) 689-2900.

### **Oops**

In the November/December 1993 issue of *Wisconsin Architect*, the general contractor for the Terminal Building Renovation project, designed by Uihlein Architects and the Zimmerman Design Group, was incorrectly identified. It should have read, "Grunau Project Development." The magazine regrets any inconvenience caused by this error.

### **Lego Maniacs**

*William C. Herbert, AIA, Mt. Horeb, offers this editorial on his annual Lego competition.*

Community service, as a marketing technique and objective, is easy, fun and more work than your worst nightmare; but remember, the key word here is fun!

Example: Mt. Horeb is the troll capital of the world. The troll population is growing annually at an ever-increasing rate. Webster's defines a troll as "a dwarf, or giant, in Teutonic folklore inhabiting caves or hills." In Teutonic folklore this may have been true, but in modern-day America, trolls have families, live and work hard and have the same concerns as the average American even though they are considered by most to be short, ugly-as-sin little critters who live in a dusk-to-dawn existence.

Wisconsin's unique climate, combined with Mt. Horeb's hilly, and at best, difficult terrain is the near perfect place for these little critters to end their migration in search of a

better life. This fact had created a severe and difficult "opportunity" for the village of Mt. Horeb . . . a severe housing shortage that threatened the troll's desire to create a better life for themselves and their families.

This fact became painfully evident to the Mt. Horeb community in August, 1991, when Decorah, Iowa, tried to claim the title of troll capital of the world. It seems they had experienced some of Mount Horeb's overflow and were trying to capitalize on it. Something had to be done! But, who was going to be entrusted with developing a humane, meaningful, workable and fun solution to this enormous opportunity? Local, state and/or the federal government? You've got to be kidding...look at HUD! The building community? No...no profit! The architectural community? Where would the solution come from?

The answer was obvious from the beginning—kids! Specifically elementary and middle school kids.

Kids, you see, when dealing with opportunities, are unconcerned, even dismayed, with the politically correct solution. They totally ignore the ineffective, feel-good approach which accomplishes nothing. They remain blissfully ignorant of the traps that engulf active professionals. By nature, they empathize with the client early and solve the problem with their best effort, minus all the baggage.

With that in mind, I put the challenge directly to the kids and developed a design competition to address the opportunity of developing the badly needed housing solution for the ever-expanding troll population. Two divisions were established, elementary (grades 1-4) and middle school (5-8). The materials to be used were the 500,000 Legos that AIA Wisconsin provides on loan for use by its

members. The program was to design a home/castle for a family of trolls, dream away and have fun. Any other group, architects included, would go ballistic with a program that simple. Only kids could make this work.

And work it did! Average participation has been 60-70 kids in each group over the past three years. The differences in the type of solutions each group has developed are pronounced and maybe even a little scary. The elementary school kids deal with almost pure fantasy, developing free-form solutions with very little structure. The middle school kids, however, develop much more structured solutions looking more like real buildings. It's almost as if some mythical door closed and another opened in their journey from 4th to 5th grade. This trend has been evident every year. Think about it—the jury(s) did.

The jury...I cannot express enough thanks to these people. These internationally known professionals (each has been out of the county at least once) were tireless in the fulfillment of their duties, and maybe more than a little bit crazy. In an ironic twist of fate, I called upon the architectural profession, the building community and, yes, even politicians to serve. Those who cannot provide the solutions were used to judge the solutions. Crazy? You bet—who better? In at least this one arena their own hang-ups were put on hold, disappeared and became mute. Do kids affect everyone this way?

The awards structure calls for one honor award and up to five merit awards for each division. Honor awards—no problem. Merit awards—this is where it went nuts. The jury, with its zeal and quest for excellence every year, feels that simple merit awards are not sufficient. They have to give them names. Three years and

thirty merit awards later, no two have ever had the same name! We have had the Art House Award, the Non-Art House Award, the Ronald-McTroll House Award, the Yuppie-Country-Gentleman-Troll House Award, the Most-Affluent-Troll House Award, the Taj-MaTroll House Award, etc. Yet, with all of this, the main goal of this competition was reinforced and validated each and every year. Design notwithstanding, that goal is fun.

It seems as though this competition has developed a life of its own. Because of it, the troll population of Mt. Horeb is expanding at an even faster rate than before. Are these kids good or what?

### **Small Project Documents**

The AIA has introduced a new family of contract documents designed specifically to address the needs of the home renovation and remodeling markets.

Developed in response to both a resolution passed the AIA Board of Directors and significant interest on the part of AIA members, the AIA's new small-project documents include:

- A105, Standard Form of Agreement Between Owner and Contractor for a Small Project
- B155, Standard Form of Agreement Between Owner and Architect for a Small Project
- A205, General Conditions of the Contract for Construction of a Small Project.

While not considered a substitute for the AIA's more detailed contracts, the small-project family addresses concerns raised by architects and contractors regarding owners who may be intimidated by the typical 40-plus-page contract set. Written in plain language, the new easy-to-understand documents provide

substantially more protection than does the typical letter form of agreement while setting forth the most basic tenets of the understanding between the parties.

Although perception of what constitutes a small project may vary significantly from one client or firm to another, the rationale for these documents is clear. For most consumers, residential projects represent both a major life decision and a significant financial investment. Nonetheless, these projects are relatively simple and straightforward in comparison to the typical 40-story office building.

The AIA believes that contracts used in renovating or remodeling homes should reflect this relative simplicity yet still provide solutions to some of the more common problems associated with design and construction. With AIA contracts in place prior to any work being done, those solutions are spelled out long before they are ever required.

At less than \$5 for the complete set, the AIA's new small-project documents provide a valuable measure of protection for those involved in residential design and construction. For further information on these AIA documents, contact Will Zachmann at (202) 626-7596. To order a set, call the AIA Wisconsin office in Madison at (608) 257-8477 or 1-800-ARCHITECT. AIA Wisconsin is the state's only full service distributor of AIA documents. Please refer to the complete list of available AIA documents reproduced elsewhere in this edition of *Wisconsin Architect*.

### **AIA Document News**

**Status 1:** The following AIA documents are in the final stages of review, expected delivery within six months:

- A501, Recommended Guide for Competitive Bidding Procedures and Contract Awards for Building Construction.
- B181, Owner-Architect Agreement for Housing Services; replaces 1978 edition.

**Status 2:** The following still have significant review required; their expected delivery is within 12 months:

- D101, Architectural Area and Volume of Buildings.
- D200, Project Checklist.
- G601, Land Survey Agreement.
- G706, Contractor's Affidavit of Payment of Debts and Claims.
- G706A, Contractor's Affidavit of Release of Liens.
- G707, Consent of Surety to Final Payment.
- G707A, Consent of Surety to Reduction in or Partial Release of Retainage.
- G800-Series is scheduled to be bound into a monograph and sold as a complete set. Sale as individual documents may not be available. A liberal license for reproduction is anticipated.

**Status 3:** These documents are in initial stages of review; delivery to be announced:

- Design/Build Documents: A191, A491 and B901.
- A201 Family of Documents: A101, A107, A111, A201, B141, B151, B161, C141, C142, C143 and C161.

### **Client Survey**

In a study conducted by the Roper Organization on behalf of the AIA, 53% of the business, health-care, educational and non-profit professionals surveyed said they are

planning to undertake some sort of renovation work in the next 18 months, and 36% said they plan new construction.

Other key survey findings include:

- Architects are held in high esteem. Ninety-one percent said they have either a high or fairly good opinion of architects.
- Many clients consider architects to be elitist and insensitive to budget issues. When asked which adjectives apply to architects, 7 in 10 respondents said the terms "demanding" and "elitist" describe architects completely or somewhat, and 6 in 10 said the term "arrogant" also applies. Forty-three percent said that "save you money" does not apply to architects and nearly one-third said the same thing about "budget sensitive."

The survey suggests several marketing implications:

- 1) *Promote pre-design and post-design services.* Because clients tend to think about hiring an architect only to design a specific building project or renovation, architects need to promote and market more aggressively pre-design services such as programming and site selection as well as post-design services such as facility management. Instead of marketing services around specific projects, architects might emphasize how they can be valuable in evaluating a client's building needs, choosing a site and making a building run efficiently once it's completed. Clients typically do not think of architects as providing these services and, therefore, may turn to others. Making clients aware of these services can lay the groundwork for long-term relationships.

- 2) *Listen and respond to client needs.* Rather than emphasizing design capabilities first, architects need to demonstrate their ability to listen and

a desire to serve the client's needs. While design ability is important, it is the way the architect listens and responds that leads most clients to select one architect over another.

3) *Be able to manage budgets and schedules.* With non-public clients, fees are considered a relative cost. Clients expect architects to demonstrate an ability to manage budgets and schedules.

4) *Opportunities in renovation and ADA.* Renovation, as opposed to new construction, provides the most opportunities. The ADA has clients puzzled and worried. They are looking for someone to solve their problems.

More than 800 businesses and institutions nationwide participated in the telephone survey. For a complete report, entitled *What Clients Need*, call (800) 365-ARCH. The cost is \$35 for AIA members, \$70 for non-members.

## AGC/ON

*The following article was submitted by Lynn Le Gault, executive vice president of AGC of Wisconsin.*

In early January, AGC of Wisconsin introduced a computerized on-line system that will revolutionize the manner in which construction documents and information are distributed and accessed. The earliest beginnings of AGC On-Line Network, or "ACG/ON" as it has come to be called, were born out of the AGC of Colorado Building Chapter's Computer Application Committee.

Several of the committee members had become increasingly frustrated with the time, money and aggravation involved in obtaining blueprints and specification information. The question was posed that in this

computer age there had to be a better way. Rick Dinsmore, an AGC of Colorado general contractor, and Bill Humphrey, a construction computer software expert, combined their knowledge to form Sierra Network Systems, Inc. (SNS). After approximately two years in the development stage, SNS first introduced AGC/ON in California, and now in Wisconsin.

In short, AGC/ON is a low-cost interactive computer network service created and developed specifically for the construction industry. The core of AGC/ON is the "Electronic Plan Room," a database containing information on public and private projects including plans, specifications and bid information. It also features information such as newsletters, labor agreements, prevailing wage rates and other valuable construction-related information.

Accessible 24 hours a day, 7 days a week, general contractors, subcontractors and suppliers will now be able to conveniently view bid documents (including addenda) directly from the comfort of their offices using a standard DOS or certain Macintosh personal computer, a high-speed modem and the special AGC/ON all-purpose viewing/plotting software program. This allows them to find and bid significantly more work, with less expense, in less time, with fewer mistakes and less hassle.

The benefits for architects, designers and, ultimately, owners, are significant. Because of the ease of accessibility, many more bidders will be able to bid on a project regardless of where they are located in the state or U.S. This will increase competition and thereby result in lower project costs. Other benefits include substantial reduction in blueprint costs; much quicker issuance and dissemination of

addenda information; quick, economical and convenient transfer of documents between the architect and client during the design development phase, including change orders; easy flow of information to and from the field for work in progress; and electronic archiving of plans and specifications.

For certain aspects that might be of specific concern to architects and designers, AGC/ON has several built-in features that can alleviate those considerations. Because AGC/ON's software allows only viewing of documents, it is absolutely impossible for anyone other than the originating owner to change a document. However, the system does include a "redline" feature which allows easy preparation of as-built drawings without any alteration to the original. Only subscribers officially registered into the system by individual name and password will have access. On top of this, more stringent password protection systems ensure private and/or negotiated projects remain private. Also, any copyrighted material such as contract documents are struck with a note being posted to the user indicating the documents were removed due to copyright infringement laws. Liability concerns related to the possibility of errors in bidding documents resulting from the electronic scanning process are essentially eliminated by use of the latest in scanning software technology.

Compared to the impact fax machines have had on the manner in which business is conducted, it is safe to say that that impact can be multiplied by ten as far as the impact AGC/ON will have on the construction industry. From top to bottom, everyone involved in the industry should realize savings in those two most precious of commodities—time and money. It is win/win for all involved.

It should be emphasized that for both architects and contractors, business will continue to be done as it always has—only now it will be done electronically. AGC/ON represents the construction industry entrance on to the information highway that has received so much attention in the general press of late. As with the introduction of anything revolutionary, there may be a few minor bumps along the way before AGC/ON becomes the norm, but there is no question it will be a fun and interesting ride for all of those who choose to participate.

Additional information can be obtained by calling AGC-Wisconsin at (608) 221-3821 and asking for Louise Peterson.

### People & Places

Wisconsin Lutheran College recently received an award for quality architectural design for its new recreation complex designed by Durrant-Heike Architects. **Jerold W. Dommer, AIA**, was the principal project architect. Congratulations!

Sunarc Studio, Oconomowoc, has been selected as a first place winner in the 1993 "Finish First" Exterior Design Contest held by Wolverine Technologies, a Livonia, Michigan vinyl building products manufacturer.

The Taliesin Preservation Commission has historic preservation opportunities for historical architects, architectural historians and researchers. Experience and ability in historic structure reports and restoration work desirable. Contact: Taliesin Preservation Commission, PO Box 397, Spring Green, WI 53588-0397 with resume or telephone (608) 588-7090.

The "Your Home" section of the Milwaukee Sentinel of November 6 featured the architect-designed homes of **Joseph W. Albert, AIA**, Milwaukee; **Mark B. Helminiak, AIA**, Cedarburg; and **Clifford W. Mayer, AIA**, Mequon. It was a terrific front-page spread that showcased the results of architects being their own clients.

### Membership Action

Please welcome the following new AIA Wisconsin members:

# EQUAL TO THE TEST

Parking structures built by J.W. Peters to withstand the tests of time. Unrivaled in durability, corrosion resistance and lifetime economy.

Ask the owners of more than 135 parking structures built in the past 20 years with pre-cast/prestressed concrete components from J.W. Peters. No one surpasses that experience, that performance.

We'll save you time. We'll save you money. We'll save you headaches...and we'll put that in writing. Ask us about our 10-year parking structure service agreement, the first such long-term commitment to quality offered in the industry.

When it's *your* responsibility, talk to J.W. Peters. We stand behind our work... and behind you.
